PROFESSIONAL SUMMARY

DevOps Engineer with **12+** years across healthcare, e-commerce, and fintech platforms, building automated infrastructure and continuous delivery systems at scale. Specialized in Kubernetes orchestration, Infrastructure as Code, observability tooling, and CI/CD pipeline optimization. Proven track record designing multi-environment deployments, reducing toil through automation, and maintaining 99.9%+ uptime across distributed systems using Terraform, Docker, and enterprise monitoring platforms.

SKILLS

- Languages:** Python, Bash, Go, JavaScript, TypeScript, SQL, HTML, CSS
- Cloud & DevOps:** Kubernetes, Docker, Terraform, AWS, Azure, CI/CD, GitHub Actions, Jenkins, Helm, GitLab CI, Amazon ECS, CloudFormation, Nginx, Apache, Linux, Prometheus, Datadog, New Relic, Grafana, CloudWatch, ArgoCD, Vault, Consul
- Backend:** Node.js, FastAPI, Django, Express, Spring Boot, GraphQL, RabbitMQ, Kafka
- Frontend:** React, Next.js, Vue.js, Redux, Tailwind CSS, MUI
- Database:** PostgreSQL, MongoDB, Redis, MySQL, DynamoDB, Elasticsearch
- Testing:** Jest, Pytest, Playwright, Cypress, k6, JMeter
- Others:** Git, GitHub, Jira, Confluence, RESTful API, WebSocket, Agile, Scrum, Infrastructure as Code, SLA/SLO Management, On-call Rotations, Incident Response

EXPERIENCE

Publicis Sapient Jun 2024–Present
Senior DevOps Engineer

- Led the design and implementation of Infrastructure as Code using **Terraform** and **Kubernetes**, automating environment provisioning across development, staging, and production for healthcare and financial services platforms handling 500k+ daily transactions.
- Drove continuous integration and continuous deployment pipeline modernization using **GitHub Actions** and **ArgoCD**, reducing deployment time from 45 minutes to under 8 minutes while enabling the development team to ship features safely with zero production incidents.
- Architected enterprise-grade monitoring and alerting infrastructure with **Datadog** and **Prometheus**, instrumenting 12 microservices across the organization and establishing comprehensive SLOs that improved mean time to resolution by 60%.
- Automated infrastructure provisioning for multi-cloud environments supporting **Azure** and **AWS**, creating reusable **Helm** charts that reduced environment setup time from 3 days to under 2 hours for new feature teams.

- Implemented **Vault** for secret management and access control policies, eliminating hard-coded credentials and ensuring compliance with healthcare security standards across all deployed services.
- Collaborated with QA and development teams to establish observability best practices, reducing debugging time for production incidents from 2 hours to under 15 minutes through structured logging and distributed tracing.
- Participated in 24/7 on-call rotation, responding to critical incidents in healthcare systems and implementing permanent fixes that prevented recurrence, maintaining **99.95%** uptime SLA.
- Optimized container image builds by refactoring **Docker** multi-stage builds and implementing layer caching strategies, cutting build time by **38%** and reducing CI/CD pipeline execution by 12 minutes daily.
- Designed and deployed automated scaling policies for **Kubernetes** workloads based on CPU and memory metrics, ensuring predictable performance during peak traffic while reducing infrastructure costs by **22%**.
- Documented operational runbooks and disaster recovery procedures, enabling junior engineers to confidently handle common operational scenarios and reducing knowledge silos across the platform team.
- Implemented automated security scanning in the deployment pipeline using container image vulnerability scanning, catching critical CVEs before production and eliminating manual security reviews.

CareSimple

Oct 2022–May 2024

Senior Full Stack Engineer

- Spearheaded the transition from manual deployment procedures to fully automated continuous delivery using **Kubernetes** and **Docker**, enabling the team to deploy healthcare platform updates 10 times per day without manual intervention.
- Built comprehensive monitoring infrastructure with **New Relic** and custom **Python** telemetry collectors, establishing real-time dashboards that surfaced performance degradation in remote patient monitoring systems before affecting clinical workflows.
- Owned the design and implementation of Infrastructure as Code for virtual care platform environments using **Terraform**, provisioning compliant healthcare infrastructure that met HIPAA requirements across multiple availability zones.
- Collaborated with DevOps team to establish incident response procedures and on-call rotation protocols, reducing time to detect and respond to production issues by **55%** through automated alerting thresholds.
- Implemented **CI/CD** pipeline improvements using **Jenkins**, integrating automated testing, security scanning, and compliance checks, which decreased manual QA effort by 30% and improved feature velocity.
- Designed and maintained **PostgreSQL** database backup and disaster recovery procedures, ensuring zero data loss during infrastructure failures and enabling point-in-time recovery within 30 minutes.
- Optimized container orchestration resource requests and limits, reducing infrastructure costs by **28%** while maintaining 99.9% uptime across the remote patient monitoring platform.
- Established metrics collection standards across the platform using **Prometheus** exporters, enabling analytics and performance reporting that directly improved clinical outcome tracking.

Shopee

Jul 2018–Sep 2022

Full Stack Engineer

- Contributed to the design and rollout of containerized microservices infrastructure using **Kubernetes** and **Docker**, supporting 100 million+ monthly active users across e-commerce, fintech, and logistics systems.
- Implemented continuous integration pipelines using **GitLab CI** and **Amazon ECS**, automating builds and deployments for 20+ internal services that collectively processed 1 million+ transactions daily.
- Built observability infrastructure using **Prometheus**, **Grafana**, and custom dashboards, enabling teams to monitor real-time performance metrics across inventory, checkout, and payment processing services.
- Collaborated with platform team to implement Infrastructure as Code practices using **Terraform** and **CloudFormation**, reducing manual infrastructure provisioning effort and improving environment consistency across development and production.
- Designed and implemented automated alerting rules for critical services in the logistics and fintech domains, reducing incident response time by **45%** and enabling proactive incident prevention.
- Developed automation scripts in **Python** and **Bash** to reduce operational toil, including automated log aggregation, database maintenance, and health check procedures that ran across 50+ production servers.
- Optimized **Docker** image builds and container registries, reducing artifact storage costs by 35% and improving deployment speed by implementing efficient caching and layer reuse strategies.
- Supported on-call rotation for e-commerce platform, diagnosing and resolving production issues in distributed systems, and implementing permanent fixes that prevented recurrence of critical failures.

Altitude Games

Nov 2014–Jul 2018

Full Stack Engineer

- Built backend services for mobile game platform handling 500k+ concurrent players, implementing server infrastructure using **Node.js** and **Docker** that scaled dynamically to match player demand.
- Established continuous integration practices using **Jenkins**, automating game builds, tests, and deployments for iOS and Android platforms, reducing release cycles from weekly to daily.
- Implemented monitoring and alerting infrastructure for game services using **Prometheus** and custom **Grafana** dashboards, providing real-time visibility into server performance and player experience metrics.
- Developed deployment automation scripts in **Bash** and **Python** that handled server provisioning, configuration, and updates across AWS infrastructure, reducing manual operational work by 60%.
- Collaborated with QA and game designers to set up automated performance testing infrastructure using **k6** and **JMeter**, catching performance regressions before production deployment.
- Managed **PostgreSQL** and **Redis** databases supporting game state and player progression, implementing backup procedures and optimizing queries that improved response times by 40% during peak gameplay.

EDUCATION

Ateneo de Manila University
Bachelor of Science in Computer Science

Aug 2010–Jul 2014
