PROFESSIONAL SUMMARY

Infrastructure Engineer with **12+** years spanning e-commerce, healthcare, and gaming, building and operating production systems at scale using **GCP, Kubernetes, and Terraform**. Experienced debugging distributed systems, managing stateful workloads, and automating infrastructure-as-code pipelines. Proven ability to design resilient architectures, reduce operational overhead, and mentor teams on DevOps best practices.

SKILLS

- Languages:** Go, Python, Bash, JavaScript, TypeScript, SQL, HTML, CSS
- Backend:** Node.js, FastAPI, Django, gRPC
- Infrastructure & DevOps:** GCP, GKE, Kubernetes, Terraform, Atlantis, ArgoCD, Helm, Docker, GitHub Actions, Cloud Build, Vault, Linux
- Observability & Monitoring:** Grafana, Prometheus, OpenTelemetry, Loki, CloudWatch, DataDog
- Database:** PostgreSQL, Redis, Cloud Spanner, Firestore, Cloud SQL, Elasticsearch
- Testing:** pytest, Jest, Playwright, Cypress
- Cloud & DevOps:** Google Cloud Platform, Cloud Run, Cloud Functions, Cloud Load Balancing, VPC, IAM, Cloud Storage, Pub/Sub
- Others:** RESTful API, GraphQL, Message Queues, Event-driven Architecture, CI/CD, Infrastructure as Code, Git, GitHub, Agile, System Design, Security Hardening

EXPERIENCE

- Publicis Sapient**
Senior Software Engineer

Jun 2024–Present
- Spearheaded infrastructure modernization across enterprise AI platforms, architecting multi-region deployments on **GCP** and **GKE** that reduced latency by **38%** and improved availability to 99.95% across Financial Services and Healthcare verticals.
 - Drove automation initiatives using **Terraform** and **Atlantis** for infrastructure-as-code governance, enabling self-service deployments that cut provisioning time from 6 hours to 18 minutes and reduced drift incidents by **92%** across 200+ cloud resources.
 - Owned production incident response and post-mortem processes for distributed systems serving millions of requests daily, implementing structured observability with **Grafana, Prometheus, and OpenTelemetry**, which reduced mean time to resolution by **45%** and built institutional knowledge across 15 platform teams.

- Designed and implemented **Vault**-based secrets management architecture with automated rotation policies, eliminating manual secret handling and achieving zero compliance violations during SOC 2 audits.
- Collaborated with security engineering to harden GCP IAM policies and implement least-privilege access controls, reducing blast radius for compromised credentials and ensuring audit-ready security posture across all workloads.
- Mentored 4 junior infrastructure engineers on distributed system debugging, **Go** scripting for operational automation, and incident triage methodologies, accelerating their path to independent on-call responsibilities.
- Migrated 8 stateful workloads from single-region to multi-cluster **GKE** with **ArgoCD** and **Helm** orchestration, enabling blue-green deployments without downtime and improving disaster recovery from 4 hours to 15 minutes RPO/RTO.
- Optimized database failover procedures for **Cloud SQL** replicas, reducing failover activation time from 12 minutes to under 2 minutes through automated health checks and circuit-breaker logic in **Python**.
- Established cost governance framework using **GCP** cost analysis and implemented resource quotas, reducing infrastructure spending by **31%** while maintaining performance SLAs.
- Architected monitoring dashboards and alert rules in **Grafana** that surfaced early warning signals for resource exhaustion, preventing 7 production outages before they impacted customer traffic.
- Drove adoption of infrastructure security scanning and vulnerability management, integrating **Cloud Build** with policy-as-code validation to prevent misconfigured resources from reaching production.

CareSimple

Oct 2022–May 2024

Senior Full Stack Engineer

- Led infrastructure modernization for remote patient monitoring platform, migrating monolith deployment from **Docker** on on-premise servers to **GKE** multi-cluster architecture using **Terraform** and **Helm**, enabling **72%** faster deployments and serving 100k+ concurrent patient sessions.
- Implemented CI/CD pipeline overhaul using **GitHub Actions** and **ArgoCD**, reducing code-to-production cycle time from 45 minutes to 8 minutes and enabling safe Friday releases for healthcare operations.
- Owned production reliability across critical patient data systems, integrating **Prometheus** metrics and **Loki** logs with centralized **Grafana** dashboards that improved incident visibility and cut debugging time by **50%** during high-volume periods.
- Designed resilient database strategy for **PostgreSQL** replicas across multi-region **GCP** infrastructure, implementing connection pooling and automated failover that eliminated 3 years of manual intervention overhead.
- Automated infrastructure provisioning with **Terraform** modules that standardized VPC, subnet, firewall, and load balancer configurations, reducing new environment setup from 8 hours to 15 minutes and ensuring compliance consistency.
- Collaborated with security team to implement **Vault** for healthcare-specific credential management, achieving HIPAA-compliant secrets rotation and audit trails for all API keys and database passwords.

- Fixed critical race condition in patient notification queue that was silently dropping alerts during peak load — rewrote event-driven logic using **Pub/Sub** with dead-letter queues, eliminating notification losses and improving delivery reliability to 99.97%.
- Established infrastructure cost monitoring framework with **GCP** budgets and alerts, working with finance and product to right-size instances and negotiate Reserved Instance commitments, reducing monthly cloud spend by **28%**.

Shopee

Jul 2018–Sep 2022

Full Stack Engineer

- Played a key role in building order fulfillment backend serving 45 million daily transactions across 6 Southeast Asian markets, using **Python**, **Go**, and **Kubernetes** to handle scale-out challenges and maintain 99.9% order success rate.
- Owned logistics integration layer that synchronized inventory and shipping status across multiple third-party carrier APIs, implementing **gRPC** services with **Pub/Sub** message queues to handle 800k+ events per minute with sub-100ms latency.
- Drove performance optimization of checkout pipeline that reduced cart abandonment by **15%** — redesigned **PostgreSQL** query patterns, added **Redis** caching for product catalogs, and implemented canary deployments with **Kubernetes** rollout strategies.
- Implemented comprehensive observability for microservices using **Prometheus** scraping and **Grafana** dashboards, reducing on-call incident detection time from 15 minutes to under 2 minutes for payment and logistics services.
- Debugged production distributed system failure affecting seller dashboard that was intermittently timing out — traced root cause to **Elasticsearch** query timeout during index rotation and rewrote aggregation logic to reduce query time by **63%**.
- Built internal developer platform for cross-region **Kubernetes** deployments using **Terraform** automation scripts, enabling 200+ engineers to safely provision staging environments without requiring DevOps approval.
- Migrated legacy monolithic payment service to microservices architecture with **FastAPI**, implementing circuit breakers and retry logic that improved system resilience during carrier API outages and reduced cascading failures by **89%**.
- Collaborated on database sharding strategy for **Cloud Spanner** that supported seller expansion from 2 million to 12 million active merchants while maintaining sub-50ms P99 latency for critical queries.

Altitude Games

Nov 2014–Jul 2018

Full Stack Engineer

- Built backend services for free-to-play mobile games, handling 500k+ concurrent players across distributed **Docker** containers orchestrated with **Kubernetes**, using **Python** and **Node.js** to power in-game economy and player progression.
- Designed and maintained **PostgreSQL** database schemas for multiplayer game state, implementing optimistic locking and transaction isolation to prevent race conditions during high-concurrency trading and item exchanges.

- Integrated real-time analytics pipeline using **Elasticsearch** and **Grafana** to surface player engagement metrics and monetization funnels, enabling product decisions that increased in-game revenue per user by **18%**.
- Implemented load testing framework using **Python** and stress tools to validate server capacity before major content updates, preventing 4 potential outages and ensuring launch stability for player communities.
- Troubleshoot distributed game server connectivity issues caused by firewall and NAT traversal problems in emerging markets, implementing failover logic and connection retries in **Go** that improved login success rate from 92% to 98%.
- Contributed to blockchain gaming initiative, building smart contract interaction layer in **JavaScript** to support NFT minting and trading, learning infrastructure principles that later proved invaluable in production SRE work.

EDUCATION

Ateneo de Manila University

Bachelor of Science in Computer Science

Aug 2010–Jul 2014
