PROFESSIONAL SUMMARY

Senior Software Engineer with **12+** years across fintech, healthcare, and e-commerce, shipping full-stack web applications end-to-end from design to production. Expert in **React**, **Next.js**, and **PostgreSQL** with proven fluency in AI-assisted development using Claude and modern coding tools. Experienced building real-time payment systems, conversion experiments, and consumer features at scale, ready to own complete product pods and deliver shipping velocity.

SKILLS

- Languages:** JavaScript, TypeScript, Python, SQL, HTML, CSS
- Frontend:** React, Next.js, Redux, Tailwind CSS, Material-UI, Webpack, Vite, Recharts
- Backend:** Node.js, Express, Supabase, Edge Functions, REST API, WebSocket
- Database:** PostgreSQL, Redis, Elasticsearch, DynamoDB
- Testing:** Jest, Pytest, Playwright, Cypress
- Cloud & DevOps:** AWS, Docker, GitHub Actions, Vercel, Heroku, EC2, S3, CloudFront
- Payments & Integration:** Stripe Connect, Stripe API, Webhook Management, OAuth2
- Generative AI:** Claude, Lovable, Cursor, GitHub Copilot
- Others:** RESTful API, GraphQL, Jira, Confluence, Git, GitHub, Figma, Analytics Instrumentation, A/B Testing

EXPERIENCE

- Publicis Sapient**
Senior Software Engineer

Jun 2024–Present
- Spearheaded full-stack feature development for enterprise AI platforms, owning the complete lifecycle from specification through deployment using **React** and **Node.js** with **PostgreSQL** backends, shipping production releases weekly across multiple verticals.
 - Drove adoption of AI-assisted development workflows leveraging **Claude** and **Cursor** to accelerate feature velocity by 2–3x, establishing code review standards for AI-generated output and maintaining codebase comprehensibility across 12+ engineers.
 - Delivered conversion experiment infrastructure and analytics instrumentation that enabled product teams to run A/B tests, resulting in data-driven feature prioritization and improved user engagement metrics across healthcare and fintech products.
 - Implemented real-time update capabilities using **WebSocket** connections integrated with **PostgreSQL** change notifications, enabling live dashboard updates for hospital operations and reducing clinician notification latency from 30 seconds to under 2 seconds.

- Architected payment processing guardrails and webhook handlers for multi-tenant billing systems, preventing **45%** of historical fraud attempts through rule-based validation and idempotency checks.
- Collaborated with product and design teams to build responsive landing pages in **Next.js** and **Tailwind CSS**, supporting go-to-market campaigns and reducing time-to-launch by a week through component reusability.
- Refactored legacy REST endpoints to support **OAuth2** authentication and role-based access control, eliminating security audit findings and enabling compliance with HIPAA requirements.
- Mentored three junior engineers on full-stack patterns, code quality practices, and AI-assisted development techniques, resulting in measurable improvements in pull request quality and deployment confidence.
- Maintained technical debt backlog with clear trade-off communication to stakeholders, balancing feature velocity with long-term code health by prioritizing refactors that had the highest defect or performance impact.
- Debugged production incidents involving race conditions in distributed payment workflows, reducing mean time to resolution from 45 minutes to under 12 minutes through systematic logging in **Prometheus** and structured error tracking.
- Drove migration of legacy monolithic services to **Docker** containers and **GitHub Actions** CI/CD pipelines, reducing deployment time from 35 minutes to 8 minutes and increasing deploy frequency from weekly to daily.
- Led cross-functional design reviews for API contracts between frontend and backend services, preventing integration misalignments and eliminating blank-screen states during deployment rollouts.

CareSimple

Oct 2022–May 2024

Senior Full Stack Engineer

- Led the development of patient engagement features for a remote hospital-at-home platform, owning end-to-end ownership of **React** and **Next.js** frontends communicating with **Supabase** and **PostgreSQL** backends, serving 500+ concurrent patients per deployment.
- Implemented Stripe Connect integration for revenue distribution between hospital systems and independent clinicians, handling split payments and fraud detection rules that prevented **\$2.3M** in invalid payouts over 18 months.
- Delivered automated webhook-driven payout enforcement system using **Node.js** and **PostgreSQL** triggers, eliminating manual payment reconciliation work and reducing accounting overhead by 20 hours per month.
- Built real-time patient monitoring dashboard with **WebSocket** subscriptions and live vital sign updates, enabling clinicians to respond to anomalies within seconds instead of minutes and reducing preventable adverse events by 12%.
- Collaborated with compliance and security teams to implement **OAuth2** and row-level security policies in **Supabase**, achieving SOC 2 certification and enabling enterprise customer onboarding.

- Optimized **PostgreSQL** query performance on patient event streams by redesigning indexes and adding materialized views, cutting dashboard load time from 3.2 seconds to 410ms and improving user satisfaction scores.
- Established code quality standards for AI-assisted development using **Claude** and **GitHub Copilot**, reviewing and refactoring AI-generated pull requests to maintain long-term maintainability across the codebase.
- Drove A/B testing framework implementation in **React** with analytics event instrumentation, enabling product to validate medication reminder designs and improve adherence rates by 18% through data-driven iteration.
- Mentored two junior full-stack engineers on authentication flows, state management with **Redux**, and database normalization, preparing them to own patient-facing features independently.

Shopee

Jul 2018–Sep 2022

Full Stack Engineer

- Contributed to the core e-commerce platform serving 295 million users across Southeast Asia, owning critical path features in **React**, **Next.js**, and **Node.js** that drove conversion and repeat purchase behavior.
- Implemented real-time inventory synchronization between seller dashboards and product listings using **Kafka** event streams and **PostgreSQL** change data capture, ensuring stock accuracy and reducing overselling incidents by **89%** during promotional campaigns.
- Built payment processing integrations with local payment gateways and **Stripe** for cross-border transactions, handling marketplace split-payment flows and fraud prevention rules that secured **\$8.7B** in annual transaction volume.
- Optimized search result ranking using **Elasticsearch** with custom scoring algorithms, reducing time-to-purchase by 1.3 seconds on average and increasing daily active user retention by 7%.
- Designed and shipped seller analytics dashboard in **React** and **Recharts**, providing merchants with order trends, revenue forecasts, and inventory health metrics, enabling 40,000+ sellers to optimize pricing and inventory.
- Collaborated with product and growth teams to build A/B testing infrastructure supporting simultaneous experiment runs on checkout flows and recommendation algorithms, validating features that contributed to 12% quarter-over-quarter GMV growth.
- Refactored monolithic payment service into microservices using **Docker** and deployed to **AWS** Kubernetes clusters, enabling independent scaling and reducing checkout latency by **22%** during peak traffic periods.
- Maintained **PostgreSQL** databases handling 50k+ queries per second through careful indexing, query optimization, and connection pooling, and debugged race conditions in concurrent order processing that had been causing payment duplicates.

Altitude Games

Nov 2014–Jul 2018

Full Stack Engineer

- Built and maintained web and mobile platforms for free-to-play games serving millions of players, owning backend services in **Node.js** and **Express** that handled real-time game state, leaderboards, and in-app purchases.
- Implemented in-app purchase and monetization system using **Stripe** API, processing millions in annual player spending and managing fraud detection rules that reduced chargebacks by 40% within six months.
- Shipped player engagement features including daily challenges and social leaderboards using **React** and **PostgreSQL**, increasing session length by 18% and improving monthly active user retention by 12%.
- Optimized backend query performance on player progression data by introducing **Redis** caching layer, reducing database load during peak play times and improving leaderboard API response time from 800ms to 310ms.
- Collaborated with game designers on A/B testing framework for monetization mechanics, running simultaneous experiments on pricing tiers and reward schedules that increased ARPU by 15% without harming retention.

EDUCATION

Ateneo de Manila University

Aug 2010–Jul 2014

Bachelor of Science in Computer Science
