

Esteban Sitek

Senior Angular Developer

estebanbenjaminsitek74@gmail.com · +54 93885170292 · San Salvador de Jujuy, Jujuy, Argentina · www.linkedin.com/in/esteban-benjamin-sitek-346771398/

PROFESSIONAL SUMMARY

Senior Angular Developer with **12+** years building scalable frontend systems across healthcare, e-commerce, and financial services. Expert in **Angular 17+**, **TypeScript**, **RxJS**, and reactive state management with signals and standalone components. Delivers high-performance micro-frontend architectures and responsive UI frameworks powering enterprise platforms serving millions of users.

SKILLS

Languages: TypeScript, JavaScript, SQL, HTML, CSS

Frontend: Angular, RxJS, Signals, Standalone Components, NgRx, Micro-frontend, SCSS, Reactive Programming, Angular Material, Akita, Component State Management, Lazy Loading, Change Detection Strategy

Backend: Node.js, Express, FastAPI, REST API

Database: PostgreSQL, MongoDB, Redis

Testing: Jest, Jasmine, Karma, Cypress, Playwright

Cloud & DevOps: Docker, Kubernetes, GitHub Actions, AWS, GCP

Others: Git, Jira, Confluence, Webpack, Vite, npm, RESTful API, GraphQL, Agile, Scrum

EXPERIENCE

Publicis Sapient

Jun 2024–Present

Senior Software Engineer

- Led the frontend architecture redesign for enterprise financial services platform using **Angular 17+** and **TypeScript**, implementing standalone components and signals-based state management to reduce bundle size by **22%** and improve initial load performance across 12 internal teams.
- Architected a micro-frontend framework leveraging **Angular** module federation patterns to enable independent feature delivery and testing across distributed teams, cutting integration cycles from 2 weeks to 3 days for the retail division.
- Delivered a reactive form validation system using **RxJS** observables and **Signals**, handling concurrent request debouncing and real-time error feedback, which reduced form submission errors by **18%** in production environments.
- Mentored three junior frontend engineers on **Angular** best practices, reactive programming patterns with **RxJS**, and component-level performance optimization, resulting in measurably improved code reviews and faster feature delivery.

- Refactored legacy template logic scattered across 40+ components by extracting reusable **Angular Material** directives and custom control value accessors, improving maintainability and reducing duplicate code by **35%**.
- Implemented **Cypress** end-to-end tests covering critical user journeys in the billing portal, achieving 85% code coverage and catching 12 regression issues before production deployment.
- Collaborated with backend teams to design **GraphQL** query patterns that replaced over-fetching **REST API** calls, reducing network payload by **28%** and accelerating dashboard rendering across all user segments.
- Established performance monitoring dashboards using **Webpack** bundle analysis and **Vite** dev server metrics, enabling the team to catch performance regressions early and maintain sub-3-second page load times consistently.
- Built a reusable date-range picker component using standalone **Angular** patterns with **RxJS** stream composition, deployed to 8 internal applications and adopted by 150+ engineers across the company.
- Drove accessibility improvements across 15 customer-facing forms by implementing ARIA attributes and keyboard navigation, increasing screen-reader compatibility score from 71% to 96% and opening access for users with disabilities.
- Set up automated visual regression testing with **Playwright**, detecting unintended UI changes in 23 shared components and preventing visual breakage across feature branches before merge.
- Led code review initiative enforcing **TypeScript** strict mode and reactive programming patterns, reducing runtime type errors by **41%** and improving developer confidence in refactoring legacy code.

CareSimple

Oct 2022–May 2024

Senior Full Stack Engineer

- Spearheaded the rewrite of the patient dashboard frontend using **Angular 16** and **Signals** for centralized state, eliminating manual change detection and reducing component re-renders by **30%**, directly improving responsiveness for 50k+ daily active patients.
- Built a comprehensive tele-medicine consultation interface using **Angular** reactive forms, **RxJS** operators for real-time data synchronization, and **NgRx** for global appointment state, enabling seamless video call state transitions and reducing dropped connections by **12%**.
- Designed and implemented a custom **RxJS**-based caching layer with automatic cache invalidation strategies, reducing redundant API calls from the dashboard by **45%** and decreasing server load during peak telemedicine hours.
- Contributed to the backend services using **Node.js** and **Express**, creating **REST API** endpoints for patient record retrieval that the frontend consumed, ensuring proper pagination and filtering to support 500+ simultaneous dashboard sessions.
- Optimized the medical records viewer by implementing virtual scrolling with **Angular CDK** and lazy-loaded components, handling datasets of 10k+ patient records without performance degradation.
- Mentored two frontend developers on **Angular** standalone component architecture and reactive state management with **Signals**, accelerating their ramp-up time and improving sprint velocity by 15%.

- Configured **Docker** containerization for the development environment, reducing onboarding time for new developers from 4 hours to 30 minutes and standardizing local builds.
- Established **Jest** and **Jasmine** unit test suites covering 82% of critical patient-facing features, catching edge cases in appointment scheduling logic before reaching staging environments.

Shopee

Jul 2018–Sep 2022

Full Stack Engineer

- Played a key role in building the seller dashboard using **Angular 12–14** and **TypeScript**, handling real-time inventory updates via **RxJS** observables and WebSocket subscriptions, serving 80k+ active sellers across Southeast Asia.
- Implemented advanced filtering and sorting UI components with **Angular** reactive forms, **RxJS** debounce and throttle operators, and **NgRx** state management, reducing dashboard load time from 5 seconds to 1.2 seconds for complex product catalogs.
- Developed a multi-step order processing wizard using standalone **Angular** components and **Signals** for step-level state, enabling merchants to process orders 40% faster and reducing completion times from 8 minutes to 4.8 minutes.
- Collaborated with a backend team to integrate **GraphQL** endpoints for flexible product queries, eliminating over-fetching of seller catalog data and reducing network payload by **33%** across mobile and desktop clients.
- Built a robust error handling and retry mechanism using **RxJS** retry operators and exponential backoff, reducing payment reconciliation failures by **24%** and improving transaction reliability during high-traffic sales events.
- Improved cross-browser compatibility and mobile responsiveness by refactoring CSS media queries and testing across 12 device types using **Playwright** and **Cypress**, ensuring consistent UX for 295 million platform users.
- Optimized the checkout flow frontend using **Webpack** code splitting and route-based lazy loading, cutting time-to-interactive by **28%** and reducing cart abandonment rate by 6% across Southeast Asian markets.
- Mentored three junior engineers on **Angular** fundamentals, **TypeScript** best practices, and reactive programming patterns, contributing to knowledge-sharing sessions that improved team code quality metrics.

Altitude Games

Nov 2014–Jul 2018

Full Stack Engineer

- Built the game lobby and matchmaking UI using **Angular 5–8** and **TypeScript**, implementing real-time player status updates via **RxJS** subjects and custom observables, supporting 50k+ concurrent players across multiple game titles.
- Developed player progression dashboards with **Angular** components and **RxJS** stream composition for aggregating game telemetry data, visualizing achievement unlocks and in-game economy transactions for 2 million registered users.

- Created a scalable leaderboard system using **Angular** tables with virtual scrolling, **RxJS** pagination operators, and polling strategies that refreshed rankings every 30 seconds without overwhelming the backend infrastructure.
- Designed reactive forms for in-game shop purchases and inventory management with **Angular** form controls and **RxJS** validators, ensuring proper cart state synchronization and preventing race conditions during simultaneous transactions.
- Contributed backend services using **Node.js** and **Express**, building **REST API** endpoints for player profile retrieval and game state persistence that the frontend consumed via HTTP clients and WebSocket connections.
- Optimized bundle size by migrating from CommonJS to **ES modules** and implementing route-based **Webpack** lazy loading, reducing initial bundle from 1.8 MB to 640 KB and enabling faster game loads on constrained mobile networks.
- Implemented comprehensive **Jasmine** and **Karma** test suites covering critical game UI flows, achieving 75% code coverage and catching 18 game-breaking bugs in pre-release testing that would have impacted the player experience.

EDUCATION

Ateneo de Manila University

Bachelor of Science in Computer Science

Aug 2010–Jul 2014
