PROFESSIONAL SUMMARY

Senior DevOps Engineer with **12+** years across fintech, healthcare, and e-commerce, building resilient cloud infrastructure and deployment pipelines. Extensive hands-on expertise with Azure cloud services, Databricks administration, Kubernetes orchestration, and infrastructure-as-code practices. Proven track record delivering scalable, secure, and compliant cloud environments while leading cross-functional teams through complex infrastructure transformations.

SKILLS

- Languages:** PowerShell, Python, Bash, JavaScript, TypeScript, SQL, HTML, CSS
- Cloud & DevOps:** Azure, Azure DevOps, Kubernetes, Docker, Terraform, ARM Templates, GitHub Actions, Jenkins, AWS, Nginx, Apache, Linux
- Backend:** Node.js, Express, NestJS, FastAPI, Django, Spring Boot
- Frontend:** React, Next.js, Vue, Angular, Tailwind CSS, MUI
- Database:** PostgreSQL, MongoDB, Redis, Databricks, MySQL
- Testing:** Jest, Pytest, Playwright, Cypress, Selenium
- Others:** RESTful API, GraphQL, Grafana, Prometheus, Datadog, Git, GitHub, Jira, Confluence, Agile, Scrum

EXPERIENCE

Publicis Sapient Jun 2024–Present
Senior Software Engineer

- Led the design and deployment of containerized microservices infrastructure using **Kubernetes** and **Docker**, enabling real-time processing of enterprise-scale AI workloads and reducing deployment friction across development and production environments.
- Spearheaded the implementation of **Azure** cloud infrastructure to support analytics platforms, including identity and access management, storage account optimization, and security governance frameworks that achieved compliance certifications across regulated industries.
- Championed a multi-region failover strategy using **Terraform** infrastructure-as-code, eliminating single points of failure and reducing mean-time-to-recovery from 45 minutes to under 8 minutes during critical incidents.
- Architected and deployed **GitHub Actions** CI/CD pipelines that parallelized test execution and automated security scanning, cutting build-to-deployment time from 60 minutes to 18 minutes across 12 microservices.

- Collaborated with security and compliance teams to implement pod security policies, network policies, and RBAC configurations in **Kubernetes**, ensuring zero privilege-escalation vulnerabilities during annual audits.
- Designed and operated a **Prometheus** and **Grafana** observability stack across 30+ services, adding structured logging, custom dashboards, and alerting rules that reduced time-to-insight for production issues by **65%**.
- Managed lifecycle of cloud resource provisioning and deprovisioning using **Azure DevOps** release pipelines, handling 200+ monthly infrastructure requests with automated approval workflows and audit trails.
- Mentored a team of 3 junior platform engineers on cloud-native best practices, **Kubernetes** administration, and incident response protocols, improving team incident response time by **40%**.
- Resolved infrastructure bottlenecks in a legacy streaming pipeline by migrating from manual **bash** scripts to containerized **Python** jobs orchestrated with **Kubernetes** CronJobs, eliminating Saturday morning outages.
- Established disaster recovery and backup strategies using **Azure** Backup and Site Recovery, achieving an RTO of 2 hours and RPO of 15 minutes across mission-critical databases.
- Drove adoption of **Terraform** modules across the platform organization, reducing infrastructure provisioning errors by **72%** and accelerating new environment spin-up from 3 days to 4 hours.

CareSimple

Oct 2022–May 2024

Senior Full Stack Engineer

- Owned the deployment and scaling strategy for a HIPAA-compliant healthcare platform on **Azure**, managing virtual machine provisioning, load balancing, and database failover to support 500k+ daily patient monitoring events.
- Drove the migration of monolithic deployment processes to containerized **Docker**-based services orchestrated with **Kubernetes**, reducing deployment errors and improving reliability to **99.95%** uptime during peak usage windows.
- Implemented end-to-end CI/CD automation using **Azure DevOps** and **GitHub Actions**, cutting release cycle time from weekly to daily deployments and enabling feature teams to ship independently without coordination bottlenecks.
- Designed **PostgreSQL** replication and high-availability architecture with **Kubernetes** StatefulSets, achieving zero data loss during node failures and cutting patient data recovery time from 6 hours to under 2 minutes.
- Collaborated with the security team to enforce **Azure** role-based access control (RBAC), API rate limiting, and VPC isolation, reducing unauthorized access attempts by **94%** and passing SOC 2 audits with zero findings.
- Built **Prometheus** metrics and **Grafana** dashboards to monitor care coordination workflows, API latency, and database performance, enabling the team to proactively detect and fix issues before they impacted patient care.

- Mentored 2 platform engineers on containerization strategies and **Kubernetes** deployment patterns, accelerating their ability to independently manage production workloads.
- Managed secrets rotation and certificate lifecycle in **Azure Key Vault**, implementing automated renewal processes that eliminated manual overhead and prevented certificate-expiration incidents.

Shopee

Jul 2018–Sep 2022

Full Stack Engineer

- Built and maintained distributed backend services using **Node.js** and **Express**, handling 80k+ concurrent requests across payment processing, order management, and seller fulfillment modules serving 295 million users.
- Implemented infrastructure monitoring and alerting using **Prometheus** and **Grafana**, tracking latency, error rates, and business metrics across 50+ microservices and reducing mean-time-to-incident-detection by **58%**.
- Designed and deployed **Redis** caching layers to reduce database query load by **40%**, improving checkout page load times from 3.2 seconds to 850 milliseconds during peak traffic periods.
- Collaborated with the DevOps team to establish **Docker**-based deployment standards and **Kubernetes** cluster configurations, enabling independent service deployments and reducing release cycle time from 2 weeks to 2 days.
- Owned the integration of **PostgreSQL** read replicas and query optimization, cutting analytics dashboard generation time from 45 seconds to 6 seconds and enabling real-time seller insights.
- Wrote **Python** automation scripts to streamline environment provisioning, log aggregation, and database maintenance tasks, saving the operations team 20+ hours per week on manual work.
- Fixed a race condition in the order processing pipeline that had been causing intermittent payment failures for **0.3%** of transactions, implementing **Redis** distributed locks and transactional guarantees.
- Participated in on-call rotations, responding to production incidents and documenting root causes — coordinated with backend and frontend teams to resolve a cascading failure affecting seller dashboards that impacted 12k+ merchants.

Altitude Games

Nov 2014–Jul 2018

Full Stack Engineer

- Contributed to the backend services of a mobile gaming platform handling millions of daily active users, implementing player progression systems, in-game economy logic, and social features using **Node.js** and **Express**.
- Built and maintained a real-time game server using **JavaScript** and **TypeScript**, managing player sessions, matchmaking logic, and leaderboard calculations with sub-100ms latency requirements.
- Designed and implemented **MongoDB** schemas for player profiles, game state, and analytics events, optimizing query patterns that improved player login performance by **32%**.
- Wrote **Python** data processing scripts to analyze player behavior, identify churn patterns, and generate reports for the game design team, informing features that increased 30-day retention by **12%**.
- Deployed applications using **Docker** containers to staging and production environments, establishing deployment scripts that reduced manual overhead and improved consistency across the studio.

- Implemented **Redis** for session caching and rate limiting, reducing authentication latency and protecting against abuse attacks that had been affecting the player community.
- Contributed to mobile game development using game engines and SDKs, collaborating with designers and artists on prototypes for blockchain-based gaming titles and earning mechanics.

EDUCATION

Ateneo de Manila University

Bachelor of Science in Computer Science

Aug 2010–Jul 2014
