PROFESSIONAL SUMMARY

Senior Full-Stack Engineer with **12+** years across healthcare, e-commerce, and gaming, architecting resilient Java/Spring Boot backends and Angular frontends deployed on AWS infrastructure. Experienced in PostgreSQL optimization, Docker containerization, CI/CD automation, and full-stack feature ownership from schema design through production monitoring. Proven ability to drive technical decisions autonomously, mentor teams, and ship high-impact systems end-to-end.

SKILLS

- Languages:** Java, TypeScript, JavaScript, Python, SQL, HTML, CSS
- Backend:** Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Gradle, Hibernate, JHipster
- Frontend:** Angular, Angular Material, RxJS, Webpack, React, Redux
- Database:** PostgreSQL, Liquibase, MongoDB, Redis
- Testing:** Jest, Pytest, Selenium, Jasmine
- Cloud & DevOps:** AWS, EC2, RDS, S3, CloudFront, Docker, Kubernetes, GitHub Actions, Jenkins, Terraform
- Others:** RESTful API, GraphQL, Bugsnag, Git, GitHub, Jira, Confluence, Agile, CI/CD

EXPERIENCE

Publicis Sapient Jun 2024–Present
Senior Software Engineer

- Led the development of full-stack enterprise platforms using **Java**, **Spring Boot**, and **Angular**, architecting microservices that scaled to handle millions of daily transactions across financial services and healthcare verticals.
- Drove end-to-end ownership of critical backend APIs built with **Spring MVC** and **Spring Data JPA**, implementing sophisticated business logic for subscription billing and patient monitoring workflows that served dozens of institutional clients.
- Spearheaded infrastructure modernization across **AWS** services including **EC2**, **RDS**, and **CloudFront**, reducing database query latency by **32%** and eliminating costly overprovisioned instances through targeted optimization.
- Implemented comprehensive error tracking and observability using **Bugsnag** and custom **Java** logging pipelines, reducing mean-time-to-resolution for production incidents from 2 hours to under 30 minutes.
- Designed and executed **PostgreSQL** schema migrations using **Liquibase**, coordinating zero-downtime deployments across staging and production environments without impacting active sessions.

- Collaborated with cross-functional teams to translate complex business requirements into technical specifications, reviewed pull requests rigorously, and mentored three junior engineers on Spring Boot patterns and **RxJS** reactive programming.
- Optimized **Angular** frontend performance by refactoring component lifecycle management with **RxJS** observables, reducing initial page load from 2.8 seconds to 1.1 seconds on slow 3G connections.
- Established **CI/CD** automation using **GitHub Actions**, parallelizing test execution and artifact builds to reduce deployment time from 25 minutes to 6 minutes.
- Troubleshoot and resolved critical production issues including database connection pool exhaustion and memory leaks in the backend, implementing preemptive monitoring rules to catch similar patterns before impacting users.
- Evaluated emerging tools and frameworks including **GraphQL** for future API redesigns, writing architectural decision documents that shaped the platform's technical roadmap for the next two years.
- Implemented **Docker** containerization for local development environments, reducing environment setup time from 3 hours to 15 minutes and cutting context-switching overhead across the team.
- Owned the design and delivery of a high-frequency reporting module that aggregated data from **PostgreSQL** using complex window functions, serving real-time dashboards to 200+ end users.
- Led security hardening initiatives including implementation of **Spring Security** OAuth2 token management, rotating secrets automation, and AWS **IAM** policy refinement across all production accounts, eliminating unauthorized access incidents.

CareSimple

Oct 2022–May 2024

Senior Full-Stack Engineer

- Played a key role in building the remote patient monitoring platform using **Spring Boot** and **Angular**, handling critical workflows for chronic disease management, hospital-at-home episodes, and population health analytics that directly impacted clinical outcomes across 50+ healthcare providers.
- Owned the complete backend architecture for patient data ingestion pipelines, designing **PostgreSQL** tables and **Spring Data JPA** repositories that safely ingested and normalized medical sensor data from wearables and IoT devices serving 30,000+ active patients.
- Drove significant performance improvements on the patient dashboard by optimizing **RxJS** subscriptions and reducing **Angular** bundle size by **28%**, which cut page load time from 3.2 seconds to 1.8 seconds and improved user retention metrics by 12%.
- Implemented end-to-end **PostgreSQL** change management using **Liquibase**, executing 40+ production migrations across multiple environments without downtime during business-critical reporting cycles.
- Architected and deployed the patient communication microservice on **AWS EC2** with **RDS PostgreSQL** backend, handling 50,000+ daily messages and maintaining 99.9% uptime during peak telehealth hours.
- Strengthened system observability by integrating **Bugsnag** error tracking and custom **Java** metrics collection, which enabled the team to identify and fix a silent data corruption bug before it affected patient records.

- Collaborated with clinical product managers and compliance officers to design HIPAA-compliant APIs using **Spring Security**, implementing row-level encryption and audit logging that passed SOC 2 Type II assessments.
- Mentored two junior engineers on full-stack patterns, code review practices, and debugging production healthcare systems under strict regulatory constraints.
- Established automated testing using **Jest** for **Angular** components and **Selenium** for end-to-end patient workflows, increasing test coverage from 22% to 68% and preventing regression bugs in medication scheduling features.
- Optimized **AWS** infrastructure costs by analyzing **CloudFront** cache hit rates and rightsizing **EC2** instance types, saving \$18,000 annually without impacting latency.

Shopee

Jul 2018–Sep 2022

Full-Stack Engineer

- Spearheaded development of the seller onboarding and shop management system using **Java**, **Spring Boot**, and **Angular**, a high-traffic feature serving 2 million+ active merchants across Southeast Asia and handling order processing at scale.
- Built and maintained backend services using **Spring MVC** and **Spring Data JPA** that powered merchant account provisioning, shop customization, and inventory synchronization workflows, processing 100,000+ daily requests with <500ms latency.
- Optimized **PostgreSQL** queries for the product catalog service by analyzing execution plans and refactoring complex joins, reducing p99 query time from 2.8 seconds to 340ms and alleviating database bottlenecks during flash sales.
- Designed **Angular** UI components using **Angular Material** for the seller dashboard, implementing data tables with sorting and filtering for shops managing up to 50,000 products with real-time stock updates via **RxJS** streams.
- Implemented **Docker** containerization and **Kubernetes** orchestration for microservices deployment, enabling the platform to auto-scale from 10 to 200 pod replicas during peak traffic surges on Singles' Day and 12.12 shopping festivals.
- Automated deployment pipelines using **GitHub Actions** and **Jenkins**, reducing manual QA hand-offs and enabling the team to deploy hotfixes in under 10 minutes.
- Conducted code reviews across the team, enforcing best practices in **TypeScript** type safety and **Spring Boot** error handling, which reduced production defects by 19% in the first quarter of adoption.
- Troubleshoot and fixed race conditions in the order reconciliation system where merchant refunds were occasionally not synchronized—added idempotent **Liquibase** migrations and defensive coding patterns to guarantee eventual consistency.
- Implemented search optimization for the seller marketplace using **Elasticsearch** and **PostgreSQL** full-text search, enabling merchants to find relevant product categories and promotional tools in under 200ms.

Altitude Games

Nov 2014–Jul 2018

Full-Stack Engineer

- Built multiplayer backend services for casual and mid-core mobile games using **Java** and custom RESTful APIs, handling real-time matchmaking, leaderboards, and in-game transactions for 50,000+ concurrent players.
- Designed and deployed game databases using **PostgreSQL** with denormalized schemas for fast read performance, implementing sharding strategies to partition player data across 8 database instances without impacting query latency.
- Contributed to the frontend using **TypeScript** and custom game client frameworks, implementing player progression UI, social features, and real-money purchase flows that generated 40% of the studio's revenue.
- Optimized asset delivery by configuring **AWS S3** and **CloudFront**, reducing game client download size by 15% through intelligent asset bundling and compression.
- Supported live game operations by monitoring server health, diagnosing unusual behavior patterns in player data, and implementing temporary workarounds during peak events while permanent fixes were being developed.
- Collaborated with game designers and artists on feature specifications, translating gameplay mechanics into backend logic for progression systems, reward tables, and limited-time event orchestration.

EDUCATION

Ateneo de Manila University

Aug 2010–Jul 2014

Bachelor of Science in Computer Science
