

Esteban Sitek

Senior Fullstack Java Developer

estebanbenjaminsitek74@gmail.com · +54 93885170292 · San Salvador de Jujuy, Jujuy, Argentina · www.linkedin.com/in/esteban-benjamin-sitek-346771398/

PROFESSIONAL SUMMARY

Senior Fullstack Java Developer with **12+** years across healthcare, e-commerce, and gaming, designing resilient Java applications and scalable microservices. Expertise in Spring Boot, Angular, and React with strong PostgreSQL and cloud infrastructure experience. Proven track record building distributed systems, optimizing performance, and delivering customer-centric solutions using modern software design patterns.

SKILLS

- Languages:** Java, TypeScript, JavaScript, Python, SQL, HTML, CSS
- Backend:** Spring Boot, Spring Framework, Spring Cloud, Spring Security, Express.js, FastAPI, Hibernate, JPA, REST API, GraphQL, gRPC, RabbitMQ, Kafka, WebSocket
- Frontend:** Angular, React, Next.js, Redux, RxJS, Material Design, Bootstrap, Tailwind CSS, Webpack, Vite
- Database:** PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, DynamoDB
- Testing:** JUnit, Mockito, Jest, Pytest, Cypress, Selenium, TestNG
- Cloud & DevOps:** AWS, Docker, Kubernetes, CI/CD, GitHub Actions, Jenkins, Terraform, EC2, RDS, S3, CloudFront, Lambda, ECS, CloudWatch
- Others:** Microservices Architecture, RESTful API, Agile, Scrum, Git, GitHub, Jira, Confluence, Figma, OpenAPI, Swagger, Apache Maven, Gradle

EXPERIENCE

Publicis Sapient Jun 2024–Present
Senior Software Engineer

- Led the design and development of enterprise-scale microservices using **Java**, **Spring Boot**, and **Kubernetes**, implementing distributed architectures that serve multiple Fortune 500 clients across Financial Services and Healthcare sectors.
- Architected API-first solutions with **Spring Security** and **PostgreSQL**, designing RESTful and **GraphQL** endpoints that handle over **500k+ daily requests** with sub-200ms response times across production environments.
- Drove cross-functional collaboration with product and design teams to translate business requirements into technical specifications, reducing implementation ambiguity by 35% and accelerating feature delivery cycles.
- Implemented comprehensive observability using **CloudWatch** and **Prometheus** metrics, enabling rapid incident response and reducing mean time to resolution by **40%** for critical services.

- Mentored three junior engineers on **Spring Framework** best practices, software design patterns, and database optimization, establishing code review standards that reduced production defects by 28%.
- Optimized legacy monolithic application by extracting domain-driven services into independently deployable **Docker** containers orchestrated with **Kubernetes**, reducing deployment time from 45 minutes to **12 minutes**.
- Designed and implemented caching strategies using **Redis** to reduce database load by **55%**, eliminating performance bottlenecks during peak traffic periods across customer-facing applications.
- Collaborated on infrastructure-as-code initiatives with DevOps teams using **Terraform** and **GitHub Actions**, automating deployment pipelines and reducing manual operational overhead by 60%.
- Championed adoption of **Hibernate** and **JPA** best practices across the organization, preventing N+1 query problems and improving query performance by **32%** on heavily-used endpoints.
- Extended observability and monitoring across distributed services, implementing structured logging with **Spring Cloud** context propagation and correlation IDs, reducing troubleshooting time by 50%.
- Evaluated and integrated third-party APIs for payment processing and identity verification, implementing resilience patterns like circuit breakers and exponential backoff to achieve 99.95% service availability.
- Delivered detailed architecture documentation and design reviews, establishing clear technical standards that guided 15+ engineers through complex system decisions and reduced rework by 25%.

CareSimple

Oct 2022–May 2024

Senior Full Stack Engineer

- Spearheaded full-stack development of remote patient monitoring dashboards using **Java**, **Spring Boot**, **React**, and **TypeScript**, enabling healthcare providers to track vitals for over **10,000 patients** in real-time.
- Built secure HIPAA-compliant APIs using **Spring Security** OAuth2 and encrypted **PostgreSQL** schemas, implementing role-based access control that met regulatory requirements and reduced security vulnerabilities by 100%.
- Designed and delivered patient data visualization components in **React** with **Redux** state management, presenting complex clinical data through interactive charts that improved clinician decision-making speed by 40%.
- Optimized database queries and implemented strategic **Redis** caching for patient records, reducing dashboard load time from 3.2 seconds to **650ms** and improving user experience during peak clinical hours.
- Collaborated closely with clinical and product teams to understand hospital workflow requirements, translating them into intuitive UX patterns that reduced training time for end-users by 50%.
- Implemented comprehensive test coverage using **JUnit**, **Mockito**, and **Jest**, achieving 82% code coverage and preventing 12 production incidents that had affected patient monitoring reliability.
- Managed seamless integration with multiple EHR systems via REST APIs and HL7 standards, building transformation layers that normalized heterogeneous data formats and ensured data consistency across platforms.
- Led technical design reviews with stakeholders to define system architecture, data flows, and security boundaries, resulting in a scalable foundation that supported 3x growth in connected facilities.

- Supported production operations by implementing automated alerts using **CloudWatch** and on-call runbooks, reducing incident response time by 35% and improving system uptime to 99.9%.
- Refactored legacy monolithic codebase into domain-driven **Spring Boot** microservices, separating concerns and enabling independent deployment, which reduced release cycles from bi-weekly to **daily**.

Shopee

Jul 2018–Sep 2022

Full Stack Engineer

- Drove development of high-performance e-commerce backend services in **Java** and **Spring Boot**, handling over **80k+ concurrent requests** during peak shopping seasons across Southeast Asia.
- Designed RESTful APIs with **Spring Framework** and **Hibernate** for product catalog, inventory, and order management systems serving **295 million users** across six countries.
- Built responsive frontend features in **React** and **TypeScript**, implementing real-time product search with **Elasticsearch** integration that reduced search latency from 800ms to **250ms**, improving conversion rates by 18%.
- Implemented distributed caching layer using **Redis** to reduce database read pressure by **60%**, enabling the platform to sustain high-volume checkout flows during festival sales events.
- Collaborated with 30+ engineers across product, backend, and frontend teams to align on API contracts and data schemas, using **OpenAPI** specifications and **Swagger** documentation to streamline integration work.
- Optimized database performance by analyzing slow query logs and implementing composite indexes on **PostgreSQL**, improving transaction throughput by **45%** and reducing P99 latency for order placement.
- Implemented asynchronous job processing using **Kafka** and **RabbitMQ** for order fulfillment workflows, decoupling services and enabling independent scaling that handled **3x traffic growth** without downtime.
- Built comprehensive test suites using **Jest** for frontend and **JUnit** for backend, establishing test-driven development practices that reduced regressions by 40% and accelerated iteration cycles.
- Participated in incident response for production outages, root-causing issues in database connection pooling and API rate limiting, implementing preventative measures that reduced repeat incidents by 80%.
- Mentored four junior engineers on full-stack development practices, code review standards, and debugging techniques, improving code quality and reducing time-to-productivity for new team members by 30%.

Altitude Games

Nov 2014–Jul 2018

Full Stack Engineer

- Built multiplayer game backend services in **Java** using **Spring Framework**, handling player authentication, session management, and real-time state synchronization for concurrent players.
- Designed NoSQL schemas in **MongoDB** and **DynamoDB** to store player progression, inventory, and economy data, supporting rapid iteration on game balance without schema migrations.
- Developed web-based admin dashboards in **Angular** and **TypeScript** for game studios to monitor player activity, configure economy parameters, and manage live events.
- Implemented **WebSocket** servers to deliver real-time game events and chat functionality, reducing latency from polling-based approach by **85%** and improving player engagement metrics.

- Optimized API response times by implementing caching strategies and database query tuning, reducing average response latency from 400ms to **140ms** and supporting **50k+ concurrent connections**.
- Established CI/CD pipelines using **GitHub Actions** and **Docker** containers, automating testing and deployment processes that reduced release cycles from weekly to daily incremental updates.
- Contributed to blockchain gaming integration, implementing smart contract interactions in proof-of-concept game title for Decentraland, exploring Web3 monetization models and player asset ownership.
- Implemented monitoring and alerting infrastructure using **CloudWatch** logs and custom **Elasticsearch** dashboards, enabling rapid diagnosis of performance issues affecting player experience.

EDUCATION

Ateneo de Manila University

Bachelor of Science in Computer Science

Aug 2010–Jul 2014
