PROFESSIONAL SUMMARY

Senior Software Engineer with **12+** years across healthcare, e-commerce, and gaming, building robust integration systems and enterprise solutions. Hands-on expert in SAP Cloud Integration (CPI), SuccessFactors, and Groovy scripting with proven ability to design and deploy complex iFlows, REST/OData APIs, and SOAP integrations. Skilled in security configuration, production monitoring, and independent solution delivery across cloud and on-premise SAP ecosystems.

SKILLS

- Languages:** Groovy, JavaScript, TypeScript, Python, SQL, HTML, CSS
- SAP & Integration:** SAP Cloud Integration (CPI), SAP Integration Suite, SAP SuccessFactors, SAP HCM, SAP BTP, Groovy scripting, iFlow design, OData APIs, REST APIs, SOAP, IDocs, Cloud Connector, SAP Cloud Identity Services, API Management, Event Mesh, Business Integration Builder, Point-to-Point Replication
- Backend:** Node.js, Express, FastAPI, Django, RESTful API, GraphQL, Message queues
- Frontend:** React, Next.js, Vue, Angular, Tailwind CSS, Redux
- Database:** PostgreSQL, MongoDB, Redis, MySQL, DynamoDB
- Testing:** Jest, Pytest, Cypress, Selenium, Postman
- Cloud & DevOps:** AWS, Azure, Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, CloudWatch, EC2, Lambda, S3, OAuth, Certificates
- Others:** CAP, SAP Joule, Datadog, Grafana, Prometheus, Git, GitHub, Jira, Confluence, Agile

EXPERIENCE

- Publicis Sapient

Senior Software Engineer

Jun 2024–Present
- Spearheaded the design and deployment of enterprise integration flows using **SAP Cloud Integration (CPI)** and **Groovy** scripting, connecting multiple third-party systems with SAP backends for large-scale financial services clients.
 - Built end-to-end **SuccessFactors** integration pipelines leveraging **OData APIs** and **REST APIs**, automating HR data synchronization across payroll, benefits, and time management systems.
 - Developed secure **SOAP**-based and **IDoc**-based interfaces between legacy on-premise **SAP HCM** and cloud systems, configuring **OAuth** credentials and certificate management to ensure compliance and reduce unauthorized access incidents.
 - Implemented production monitoring and alerting for integration flows in **SAP Integration Suite**, resolving critical errors within SLA and improving system uptime to 99.8% across eight mission-critical iFlows.

- Configured **Cloud Connector** for secure hybrid connectivity between SAP BTP and on-premise systems, enabling seamless data flow for three enterprise clients without infrastructure downtime.
- Collaborated with data warehouse and HR teams to document integration specifications and technical designs, establishing reusable patterns that reduced future development cycles by 35%.
- Proactively evaluated emerging **SAP BTP** capabilities including **Event Mesh** and **API Management**, implementing event-driven architecture for real-time HR event consumption across downstream platforms.
- Mentored two junior developers on **CPI** best practices, Groovy custom logic, and error handling strategies, strengthening team capability in hands-on iFlow development.
- Supported integration testing and cutover activities for two full-cycle HR data migrations, validating data integrity across SuccessFactors, payroll, and benefit systems prior to go-live.
- Investigated and resolved performance bottlenecks in message transformation logic, reducing **IDoc** processing latency from 2.8 seconds to 680 milliseconds through optimized Groovy scripts and caching strategies.
- Implemented comprehensive logging and structured error handling across 12 production iFlows, enabling faster root cause analysis and reducing mean time to resolution (MTTR) by 42%.
- Stayed current on **SAP Integration Suite** roadmap, recommending migration of three legacy point-to-point adapters to modern **Business Integration Builder** patterns for improved maintainability.

CareSimple

Oct 2022–May 2024

Senior Full Stack Engineer

- Led the build and deployment of critical integration flows connecting healthcare provider systems with **SAP SuccessFactors**, enabling real-time synchronization of clinician credentials, shift assignments, and compliance data across 15+ regional health networks.
- Developed **REST API** wrappers and **OData API** consumers to bridge legacy electronic health record (EHR) systems with cloud-based HR platforms, handling HIPAA-compliant transformations in **SAP Cloud Integration (CPI)** using custom **Groovy** logic.
- Engineered **SOAP**-based connections between on-premise **SAP HCM** instances and downstream payroll and benefits platforms, ensuring deterministic message delivery and error recovery through dead-letter queue patterns.
- Built end-to-end **IDoc** interfaces for master data synchronization (employee records, organizational hierarchy, job classifications), managing schema versioning and backward compatibility across five production cutover cycles.
- Configured and maintained **OAuth** security artifacts and certificate chains for API authentication, reducing credential rotation overhead by 60% through automated expiration alerts and streamlined renewal processes.
- Monitored and troubleshooted integration flows in production **SAP BTP** environments using native alerting and **CloudWatch** dashboards, resolving critical failures within 15 minutes and maintaining 99.5% availability.

- Designed and implemented comprehensive integration testing frameworks using **Postman** and custom **Node.js** validation scripts, catching 94% of data mapping defects before production deployment.
- Collaborated with compliance and security teams to document integration architecture and data flow specifications, enabling SOC2 audit pass and reducing compliance risk exposure.
- Reduced integration deployment time from 3 hours to 22 minutes by building CI/CD automation in **GitHub Actions**, decreasing manual deployment errors and enabling safer weekend deployments.
- Mentored three team members on **CPI** iFlow patterns and **Groovy** scripting best practices, establishing center of excellence for enterprise integration within the healthcare technology domain.

Shopee

Jul 2018–Sep 2022

Full Stack Engineer

- Drove the design and implementation of a distributed order-to-fulfillment integration system that connected Shopee's marketplace platform with logistics, payment, and merchant management backends, handling 45,000+ daily transactions across Southeast Asia.
- Built **RESTful API** microservices in **Node.js** and **TypeScript** that exposed order, inventory, and settlement data to third-party merchant systems, implementing **GraphQL** federation for efficient data querying and reducing client payload sizes by 38%.
- Engineered **PostgreSQL** schema optimizations and caching strategies using **Redis** for high-volume transaction processing, cutting order lookup latency from 1.2 seconds to 240 milliseconds during peak traffic periods.
- Implemented comprehensive error handling, retry logic, and circuit breakers for cross-service communication, preventing cascading failures and improving overall platform stability to 99.7% uptime.
- Developed real-time event streaming infrastructure using **Kafka** for asynchronous order event processing, decoupling payment processors, notification systems, and warehouse management from core transaction flows.
- Built frontend features in **React** and **TypeScript** for merchant dashboards, enabling real-time visibility into order status, settlement reports, and compliance metrics, serving 1.2 million active sellers.
- Established automated testing practices using **Jest** and **Cypress**, achieving 82% code coverage and reducing production defect escape rate by 51% through robust integration and end-to-end test suites.
- Collaborated with data warehouse teams to design and maintain event schemas that powered analytics and business intelligence pipelines, supporting merchant insights and executive reporting.
- Led performance optimization initiative that identified N+1 query patterns in order processing, refactoring database access layers and reducing API response times by 45% across peak periods.
- Supported HR data exports and integrations with external systems, working with partner teams to design ETL pipelines that ensured accurate payload delivery and data consistency validation.

Altitude Games

Nov 2014–Jul 2018

Full Stack Engineer

- Built and maintained multiplayer game backends in **Node.js** and **Express**, handling real-time player state synchronization, matchmaking, and leaderboard updates for 1.5 million monthly active users across Android and iOS.

- Designed **RESTful APIs** and **WebSocket** connections that streamed live game events to clients with sub-100ms latency, enabling responsive gameplay and reducing player lag complaints by 67%.
- Implemented **MongoDB** schemas for game data persistence, optimizing queries for rapid player lookup and match history retrieval during concurrent play sessions across six published titles.
- Engineered secure authentication and session management using **JWT** tokens and **Redis**-backed token stores, reducing unauthorized access attempts by 91% and enabling seamless multi-device play.
- Developed data processing pipelines in **Python** and **JavaScript** that aggregated player telemetry, session metrics, and monetization events for business intelligence teams, feeding dashboards that informed game balance decisions.
- Built **React**-based internal tools and dashboards for game operations teams, enabling real-time monitoring of player populations, purchase events, and server health metrics across all published games.
- Collaborated with game designers and art teams to implement features including battle mechanics, achievement systems, and blockchain integration for web3 titles, translating design specifications into performant backend logic.
- Implemented automated testing frameworks using **Jest** for API endpoints and **Selenium** for end-to-end gameplay scenarios, catching regressions before production and improving release stability.

EDUCATION

Ateneo de Manila University

Bachelor of Science in Computer Science

Aug 2010–Jul 2014
