

Wellington Santos

Senior AEM Engineer

santosswelington23@gmail.com · +55 19983546558 · Gonçalves Dias, Maranhão, Brazil · www.linkedin.com/in/welington-santos-53044a3b2/

PROFESSIONAL SUMMARY

Senior Software Engineer with **8+** years across sports commerce, retail e-commerce, and healthcare IT, specializing in enterprise forms and document-generation solutions. Expert in **Adobe Experience Manager Forms**, **XDP/XFA** template development, and dynamic PDF generation using **AEM Forms Output Service**. Proven ability to design end-to-end document architectures, integrate with enterprise backends via **REST APIs** and **Java/OSGi** services, and deliver high-volume personalized document workflows in production.

SKILLS

- Languages:** Java, JavaScript, XML, JSON, SQL, HTML, CSS
- AEM & Forms:** Adobe Experience Manager Forms, AEM Forms Designer, Adaptive Forms, XDP/XFA, Form Data Model, AEM Forms Output Service, AEM Forms Document Services, AEM Sites, AEM Assets, AEM Author/Publish, JCR, Sling, AEM Dispatcher, AEM as a Cloud Service
- PDF & Document Generation:** Dynamic PDF Generation, PDF/A, Document of Record, Adobe Acrobat Sign, Submission PDF, AcroForms, XSD
- Backend & Integration:** OSGi, REST APIs, SOAP Web Services, Enterprise Integration
- Database:** PostgreSQL, MongoDB
- Testing:** Jest, Pytest, Unit Testing, Integration Testing
- Cloud & DevOps:** AWS, Docker, Kubernetes, CI/CD, Maven, Git, GitHub Actions, Cloud Manager
- Others:** RESTful API, GraphQL, Grafana, Prometheus, Datadog, Jira, Confluence, Agile, Scrum

EXPERIENCE

Fanatics Oct 2023–Present
Senior Software Engineer

- Led development of a personalized order-fulfillment platform handling **30k+** daily transactions, building the backend services in **Java** and **OSGi** that integrated with downstream warehouse and shipping systems to guarantee order accuracy and real-time status tracking.
- Spearheaded implementation of a dynamic document-generation pipeline for transactional correspondence including order confirmations, invoices, and shipping notifications, leveraging **AEM Forms Output Service** with **XDP/XFA** templates to produce **50k+** daily personalized PDFs.
- Architected and delivered a forms submission workflow that captured customer preferences and regulatory disclosures, using **Adaptive Forms** with **Form Data Model** to pre-populate data from the CRM and route submissions to approval processes in the operations team.
- Designed and deployed a caching strategy using **Redis** for frequently-accessed template fragments and data models, which reduced PDF-generation latency from **2.8 seconds** to **650ms** under concurrent load.

- Integrated **AEM Forms** with **REST APIs** connecting inventory, billing, and customer-management systems, implementing secure OAuth2 token validation and implementing automatic retry logic for transient failures.
- Built custom **Java/OSGi** services to merge business data from **MongoDB** with **XDP** templates, handling dynamic pagination for multi-page invoices and order-fulfillment documents exceeding **100 pages** per record.
- Configured form validations and conditional logic in **Adaptive Forms** to enforce business rules including inventory availability checks, payment method restrictions, and tiered-pricing calculations before submission.
- Deployed form solutions using **CI/CD** pipelines with **Maven** and **Docker** to staging and production environments, implementing automated testing for **XFA** script execution and PDF output accuracy.
- Mentored two junior developers on **XDP/XFA** template design and **AEM Forms** integration patterns, conducting code reviews and sharing best practices for reusable form components.
- Reduced form validation errors by **34%** through implementing client-side and server-side validation using **JavaScript** and **Java**, catching data quality issues before submission.
- Collaborated with product and legal teams to implement dynamic legal clauses and terms-of-service sections in **Adaptive Forms**, using **AEM Forms** component configuration to conditionally display terms based on user region and product type.
- Troubleshooted and resolved **XFA** rendering issues affecting **PDF** output consistency across different form configurations, identifying root causes in template binding logic and correcting field mapping.

Walmart

Sep 2022–Oct 2023

Senior Software Engineer

- Drove end-to-end implementation of a membership enrollment form using **Adobe Experience Manager Forms** and **Adaptive Forms Core Components**, integrating with member-services backend via **REST APIs** and **SOAP Web Services** to retrieve eligibility and enrollment history.
- Owned the document-generation architecture for membership certificates and tier-specific benefits statements, designing **XDP/XFA** templates with dynamic content and implementing **AEM Forms Output Service** to batch-generate **75k+** personalized PDFs monthly for member communications.
- Engineered data-mapping layer connecting enterprise member database and policy-administration system to **Form Data Model**, enabling form pre-population and real-time validation of membership status and benefit eligibility.
- Developed reusable form fragments for common sections including membership tier disclosures, payment method collection, and benefit selection, reducing form development time by **45%** for future enrollment initiatives.
- Implemented electronic-signature workflow integrating **Adobe Acrobat Sign** with enrollment and application forms, managing signature routing across member and compliance-approval steps and archiving signed PDFs to secure repositories.

- Built custom **Java/OSGi** services to transform legacy billing system outputs into **XML** data structures compatible with **XDP** templates, enabling dynamic invoice and statement generation with proper pagination and financial-summary sections.
- Optimized **PDF/A** generation for compliance-mandated long-term document archival, implementing checksums and metadata validation to ensure regulatory-audit readiness across **12 months** of generated statements.
- Collaborated with compliance and IT teams to implement secure form submission handling, encrypting customer PII using industry-standard encryption and validating input against **XML Schema** definitions before persistence.
- Debugged and resolved **XFA** form rendering issues causing blank-field problems in generated PDFs, identifying schema-binding mismatches and correcting template structure to guarantee consistent output across **20+** form variants.
- Supported **AEM Forms 6.5 LTS** infrastructure maintenance including security patch deployments and form asset migration, coordinating with ops teams to minimize production downtime.

E-POT

Jun 2018–Jul 2022

Full Stack Engineer

- Built a healthcare provider-portal forms solution using **Adobe Experience Manager Forms** and responsive **Adaptive Forms**, enabling patient intake forms and medical-request submissions with **30k+** monthly transactions.
- Implemented dynamic PDF generation for patient statements and lab reports using **AEM Forms Document Services** and **XDP** templates, handling complex medical data structures and conditional sections that rendered **2k+** concurrent daily requests.
- Designed and developed **XFA/XDP** templates for insurance claim forms, patient consent documents, and discharge summaries, implementing repeating tables for itemized medical procedures and conditional signature sections based on authorization type.
- Integrated **AEM Forms** with **REST APIs** exposing electronic health records (EHR) system and patient-demographics data, implementing pre-population logic and secure token-based authentication to retrieve protected health information.
- Developed **Java/OSGi** custom services to perform form-data transformations from incoming **JSON** payloads into **XML** structures required by **XDP** templates, handling schema validation and error-state fallback mechanisms.
- Implemented batch-document generation workflows triggered by backend events, orchestrating retrieval of patient data, **XDP** template rendering via **Output Service**, and email distribution of generated compliance documents to healthcare facilities.
- Built form-submission and approval workflows using **AEM Forms** workflow engine, routing patient-authorization forms to medical staff for review and implementing conditional next-step logic based on approval outcomes.
- Configured form validations and calculations in **Adaptive Forms**, including medical-quantity validation, insurance-coverage eligibility checks via backend API calls, and automatic calculation of out-of-pocket costs.

- Deployed healthcare forms infrastructure using **Docker** containers and **Kubernetes** orchestration, implementing horizontal scaling to handle seasonal spikes in patient intake during flu season.

EDUCATION

University of Tokyo

Apr 2014–Mar 2018

Bachelor of Science in Computer Science
