

Wellington Santos

Senior MuleSoft Developer

santoss Wellington23@gmail.com · +55 19983546558 · Gonçalves Dias, Maranhão, Brazil · www.linkedin.com/in/welington-santos-53044a3b2/

PROFESSIONAL SUMMARY

Senior Software Engineer with **8+** years across sports commerce, retail e-commerce, and healthcare IT, designing and deploying enterprise integration solutions using **MuleSoft Anypoint Platform, Mule 4**, and **API-led connectivity**. Proven technical lead expertise in distributed system architecture, microservices integration, and CI/CD automation. Skilled in REST/SOAP APIs, secure authentication, and cross-team collaboration driving mission-critical platform reliability.

SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL, HTML, CSS

Backend: Mule 4, MuleSoft Anypoint Platform, Spring Boot, Node.js, Express, FastAPI

Integration & API: API-led Connectivity, REST API, SOAP API, Data Weave, RAML, OpenAPI Specification, JSON, XML, Asynchronous Messaging, Event-driven Architecture

API Management: Anypoint API Manager, Anypoint Exchange, Anypoint Runtime Manager, Cloud Hub, Runtime Fabric, API Gateway, OAuth 2.0, JWT, mTLS, API Policies

Database: PostgreSQL, MySQL, MongoDB, Oracle, Elasticsearch, Redis

Testing: MUnit, Jest, Pytest, Postman, Selenium

Cloud & DevOps: Azure DevOps, GitHub Actions, Jenkins, Docker, Kubernetes, AWS, Azure, Cloud Hub, GitHub, Git, Maven, Gradle, Terraform, CloudFormation

Others: RESTful API, GraphQL, Microservices, Enterprise Integration, Error Handling & Logging, API Governance, Performance Monitoring, Salesforce Integration, SAP Integration, ERP Systems, Technical Documentation, Jira, Confluence, Agile

EXPERIENCE

Fanatics

Oct 2023–Present

Senior Software Engineer

- Led the design and deployment of event-driven microservices architectures processing real-time sports transaction data, integrating **Mule 4** with **Kafka** for asynchronous order and payment workflows across the sports commerce platform.
- Spearheaded API governance and security standards implementation using **Anypoint API Manager** and **OAuth 2.0** token validation, protecting sensitive user and commerce data while enabling safe third-party integrations.
- Architected a multi-tenant integration solution leveraging **API-led Connectivity** principles and **Cloud Hub** deployment, reducing integration onboarding time from 6 weeks to under 2 weeks for new data providers.

- Mentored a distributed team of 4 backend engineers on **REST API** design patterns, **Data Weave** transformation logic, and error handling best practices, resulting in a **30%** reduction in production integration incidents.
- Collaborated with infrastructure and product teams to establish CI/CD automation using **GitHub Actions** and **Maven**, enabling weekly releases with zero-downtime deployments across multiple geographic regions.
- Troubleshooted and resolved critical production incidents affecting payment processing, including a race condition in async message handling that had been causing **2.3%** of orders to fail silently.
- Designed and implemented comprehensive logging and monitoring standards using structured **JSON** payloads and **Prometheus** metrics, cutting mean-time-to-resolution for integration failures from 90 minutes to under 15 minutes.
- Implemented **JWT**-based mutual authentication between internal microservices and legacy third-party commerce platforms, eliminating the need for rotating credentials and reducing security audit findings by **40%**.
- Extended the platform's integration capabilities by building reusable **RAML** specifications and publishing them to **Anypoint Exchange**, enabling product teams to self-serve API integrations without backend engineering involvement.
- Partnered with data engineering to redesign real-time event streaming pipelines, moving from request-response patterns to **asynchronous messaging**, which decreased API latency by **35%** during peak traffic.
- Drove adoption of **MUnit** testing across the integration layer, establishing a test-first culture that reduced post-deployment defects by **45%** and improved deployment confidence across engineering teams.

Walmart

Sep 2022–Oct 2023

Senior Software Engineer

- Drove the end-to-end architecture of a **Mule 4**-based integration platform for retail and e-commerce data synchronization, connecting point-of-sale systems, inventory management, and order fulfillment using **API-led Connectivity** across **Cloud Hub**.
- Built and optimized **REST API** and **SOAP API** adapters for SAP and legacy ERP systems, enabling real-time inventory visibility across **Walmart.com** and brick-and-mortar stores, improving stock accuracy by **28%**.
- Established enterprise API security governance by implementing **mTLS** certificate validation and **API Policies** within **Anypoint API Manager**, reducing unauthorized API access attempts by **99.2%** over 6 months.
- Collaborated with platform and DevOps teams to migrate integration workloads from on-premises infrastructure to **Azure Cloud Hub** runtime, reducing operational overhead and achieving **38%** cost savings annually.
- Designed **JSON** and **XML** transformation workflows using **Data Weave** for complex retail data mapping scenarios, handling millions of daily transactions with consistent, validated outputs.
- Led a team initiative to automate API onboarding and testing through **Azure DevOps** pipelines and **MUnit** framework, cutting time-to-production for new integrations from 5 weeks to 10 days.

- Implemented comprehensive error handling and retry logic with **exponential backoff** for flaky payment gateway integrations, reducing checkout failures by **21%** during peak holiday shopping periods.
- Published and maintained shared API contracts using **OpenAPI Specification** and **Anypoint Exchange**, enabling cross-functional teams in the US, Mexico, and Brazil to align on integration contracts asynchronously.

E-POT

Jun 2018–July 2022

Full Stack Engineer

- Built scalable backend services and integration layers for healthcare IT platforms using **Java**, **Spring Boot**, and **Node.js**, processing patient records and clinical workflows across multiple hospital systems.
- Contributed to the design of a microservices-based billing system integrating with accounting and financial data sources using **REST API** patterns and **asynchronous messaging**, improving billing cycle speed by **18%**.
- Developed web applications and internal dashboards for system monitoring and data visualization, leveraging **React**, **TypeScript**, and **PostgreSQL** to give operations teams real-time visibility into system health.
- Implemented database optimization and query refactoring across healthcare datasets, reducing report generation time from 45 minutes to under 8 minutes by redesigning **SQL** indexes and adding **Redis** caching layers.
- Participated in multi-team CI/CD implementation using **Jenkins** and **Git**, establishing standards for automated testing and deployment that reduced production incidents by **26%** in the first year.
- Supported legacy application integrations by developing middleware components that bridged incompatible data formats using **XML** and **JSON** transformation, enabling healthcare workflows to operate without manual data entry.
- Contributed to infrastructure-as-code initiatives by writing **Terraform** templates for AWS resources, reducing environment provisioning time from 4 days to under 3 hours and improving reproducibility.

EDUCATION

University of Tokyo

Apr 2014–Mar 2018

Bachelor of Science in Computer Science
