

Wellington Santos

Senior Software Engineer | AWS, CloudWatch, EC2, IAM

santoss Wellington23@gmail.com · +55 19983546558 · Gonçalves Dias, Maranhão, Brazil · www.linkedin.com/in/welington-santos-53044a3b2/

PROFESSIONAL SUMMARY

Senior Software Engineer with **8+** years across sports commerce, retail e-commerce, and healthcare IT, building resilient cloud-native systems with deep AWS infrastructure expertise. Proficient in monitoring, incident management, and operational excellence using CloudWatch, EC2, and IAM across distributed environments. Ready to transition technical depth into L1 cloud operations leadership supporting global teams.

SKILLS

Languages: Bash, Shell Scripting, Python, JavaScript, TypeScript, SQL, HTML, CSS
Backend: Node.js, Express, FastAPI, Django, Spring Boot
Frontend: React, Next.js, Vue.js, Redux
Database: PostgreSQL, MySQL, MongoDB, Redis, DynamoDB
Testing: Jest, Pytest, Selenium, Cypress
Cloud & DevOps: AWS, EC2, S3, IAM, EBS, ELB, CloudWatch, AWS Lambda, RDS, CloudFront, SNS, SQS, VPC, Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, Linux
Others: RESTful API, GraphQL, WebSocket, ServiceNow, Jira, Incident Management, Monitoring, Prometheus, Grafana, Git, GitHub, Agile, Scrum

EXPERIENCE

Fanatics Oct 2023–Present
Senior Software Engineer

- Spearheaded the design and deployment of a highly available sports commerce platform infrastructure across multiple **AWS** regions, leveraging **EC2** auto-scaling groups, **ELB** load balancers, and **CloudWatch** custom metrics to maintain **99.95%** uptime during peak sports events.
- Owned the incident response workflow for production outages, implementing automated alerting rules in **CloudWatch** that reduced mean time to detection (MTTD) from 12 minutes to under 2 minutes for critical failures across the sports betting and collectibles verticals.
- Architected the observability layer by integrating **CloudWatch**, **Prometheus**, and **Grafana** dashboards, enabling the operations team to correlate infrastructure health with application performance metrics and troubleshoot issues without context switching.
- Performed hands-on troubleshooting across **EC2** instances, **EBS** volumes, and **S3** storage buckets when storage utilization spiked unexpectedly during inventory syncs, identifying a leaked file descriptor in an older **Docker** container and reducing storage costs by **\$40k** annually.

- Documented and maintained comprehensive operational runbooks for common failure scenarios in **AWS IAM** access patterns, which reduced onboarding time for new support engineers by 6 weeks and cut permission-related incidents by **70%**.
- Collaborated with the platform security team to audit and enforce **IAM** policies across 15+ **AWS** accounts, tightening resource access controls and eliminating overly permissive roles that had accumulated over time.
- Managed the backup strategy and restore procedures for **DynamoDB** tables and **RDS** instances using **AWS Lambda** functions, testing recovery time objectives quarterly and maintaining documentation in **Confluence** for compliance.
- Supported shift-based on-call operations during business-critical events, handling **AWS** quota increases, **VPC** networking issues, and **CloudFront** cache invalidations to ensure uninterrupted service delivery.

Walmart

Sep 2022–Oct 2023

Senior Software Engineer

- Led the migration of the e-commerce fulfillment platform from on-premise datacenters to **AWS**, designing a multi-tier architecture using **EC2** instances, **S3** for artifact storage, **CloudWatch** for centralized logging, and **IAM** roles for secure cross-service authentication across 40+ internal services.
- Drove incident triage and resolution for the retail advertising system by setting up **CloudWatch** dashboards that surfaced database bottlenecks and API response time degradation, enabling junior engineers to independently resolve **L1** alerts and reducing escalation rate to L2 by **45%**.
- Built and operationalized comprehensive monitoring for the financial services payment gateway, installing **CloudWatch** alarms for transaction timeouts, **RDS** replication lag, and **IAM** authentication failures, which prevented **3** major outages predicted by the alerts.
- Maintained **AWS** infrastructure health across the retail media network, managing **EC2** patch updates, **EBS** volume expansions, and **Lambda** function deployments using **Terraform** and **GitHub Actions**, reducing manual infrastructure tasks by **60%**.
- Implemented a self-service incident ticket creation system integrated with **Jira** and **ServiceNow**, reducing time from alert detection to ticket creation from 8 minutes to under 1 minute and enabling automated escalation logic based on severity.
- Troubleshooted and resolved complex networking issues in the **VPC** spanning grocery fulfillment centers and e-commerce warehouses, diagnosing an issue where **S3** transfer acceleration was misconfigured and reducing file sync latency by **52%**.
- Established on-call rotation processes and created a runbook library in **Confluence** documenting common **AWS** failure modes, **IAM** policy errors, and **CloudWatch** metric interpretation, which trained 8 junior engineers on L1 troubleshooting fundamentals.

E-POT

Jun 2018–July 2022

Full Stack Engineer

- Built end-to-end healthcare IT solutions deployed on **AWS** infrastructure, handling both application development in **Python** and **JavaScript** as well as operational aspects including **EC2** instance management, **RDS** database administration, and **CloudWatch** log aggregation for regulatory compliance.

- Contributed to the initial cloud migration effort by architecting the network topology in **AWS VPC**, configuring **IAM** roles and policies to enforce least-privilege access across dev, staging, and production environments, and documenting the security model in operational guides.
- Supported the infrastructure layer by writing **Bash** and **Shell** automation scripts that automated routine tasks like **EC2** startup/shutdown, **S3** bucket lifecycle policies, and log rotation, reducing manual ops overhead by approximately **25 hours per month**.
- Troubleshoot production incidents spanning application code, database performance, and **AWS** services by analyzing **CloudWatch** metrics, **RDS** slow query logs, and application error traces, identifying and fixing a connection pooling leak that had been causing intermittent **IAM** authentication timeouts.
- Maintained operational documentation and created incident management procedures using **Jira** for ticket tracking, establishing a clear escalation path between L1 triaging and L2 engineering support for healthcare system issues.

EDUCATION

University of Tokyo

Bachelor of Science in Computer Science

Apr 2014–Mar 2018
