

Wellington Santos

Senior Software Engineer | AWS, Kubernetes, Terraform

santoss Wellington23@gmail.com · +55 19983546558 · Gonçalves Dias, Maranhão, Brazil · www.linkedin.com/in/welington-santos-53044a3b2/

PROFESSIONAL SUMMARY

Senior DevOps Engineer with **8+** years across sports commerce, e-commerce, and healthcare IT, architecting scalable microservices infrastructure on **AWS** and **Kubernetes**. Experienced in Infrastructure as Code, CI/CD automation, and observability across containerized workloads. Proven expertise in **Terraform**, **Docker**, and cloud-native deployments delivering reliable systems at scale.

SKILLS

- Languages:** Python, Bash, JavaScript, TypeScript, SQL, HTML, CSS
- DevOps & Infrastructure:** Kubernetes, Docker, Terraform, Terragrunt, GitHub Actions, CI/CD, Infrastructure as Code, Container orchestration, EKS, EC2, Auto Scaling, Load Balancing, HPA
- AWS Services:** EKS, EC2, S3, Lambda, RDS, DMS, API Gateway, SQS, SNS, CloudWatch, AWS Secrets Manager, CloudFront, IAM
- Monitoring & Observability:** New Relic, CloudWatch, Prometheus, Grafana, Datadog, ELK Stack
- Database:** PostgreSQL, MySQL, Redis, DynamoDB, MongoDB
- Testing:** Jest, Pytest, Selenium, Integration testing, Automated testing
- Cloud & DevOps:** Linux, Git, Jenkins, Nginx, Apache, Helm, GitOps, Vault, SSL/TLS
- Others:** Microservices, REST APIs, Swagger, Apache Kafka, RabbitMQ, Agile, Scrum, GitFlow, Security hardening, Compliance, Vulnerability scanning

EXPERIENCE

- Fanatics**
Senior DevOps Engineer

Oct 2023–Present
- Led the migration of legacy monolithic applications to a **Kubernetes**-based microservices architecture, deploying services across **EKS** clusters in multiple AWS regions and reducing infrastructure costs by **32%** through optimized resource utilization.
 - Spearheaded the design and implementation of a comprehensive **Terraform** and **Terragrunt** infrastructure codebase for provisioning and managing AWS resources including **EC2**, **RDS**, **S3**, and **Lambda** functions, enabling rapid environment replication and reducing manual configuration errors by **95%**.
 - Championed a complete overhaul of the CI/CD pipeline using **GitHub Actions**, integrating security scanning, automated testing, and compliance checks into the deployment process, which shortened release cycles from 4 hours to 45 minutes and eliminated critical vulnerabilities before production deployment.

- Implemented multi-layer observability across microservices using **New Relic** and **CloudWatch**, instrumenting **Kubernetes** clusters with custom metrics and alerts, which enabled the on-call team to identify and resolve production incidents **40%** faster than previous manual investigation methods.
- Orchestrated cluster security hardening initiatives including network policies, pod security policies, and RBAC configurations in **EKS**, reducing security audit findings by **78%** and achieving compliance certification for financial transaction processing workloads.
- Deployed and managed **Redis** cache layer for session management and distributed caching across the sports betting platform, reducing database query load by **55%** and improving checkout performance from **3.2s** to **1.1s** during peak traffic events.
- Collaborated with development teams to establish deployment runbooks and disaster recovery procedures, enabling confident rollback capabilities and SLA compliance at **99.95%** uptime across all production environments hosting millions of daily transactions.
- Mentored three junior engineers on containerization best practices, **Docker** image optimization, and **Kubernetes** resource management, fostering a strong DevOps culture and reducing container build times by **25%** through shared knowledge and standardized processes.
- Implemented automated capacity planning workflows using **Python** scripts that analyzed **CloudWatch** metrics and triggered **HPA** scaling policies, preventing performance degradation during major sporting events with traffic spikes exceeding **10x** baseline volume.
- Evaluated and integrated **Apache Kafka** as the event streaming backbone for real-time data pipelines supporting the collectibles marketplace, establishing patterns for idempotent consumption and exactly-once semantics that simplified downstream analytics processing.
- Managed **AWS Secrets Manager** integration across all microservices, automating credential rotation and enforcing least-privilege access controls, which eliminated hardcoded secrets in repositories and resolved **12 critical** security vulnerabilities discovered in code audits.

Walmart

Sep 2022–Oct 2023

Senior Software Engineer

- Drove the containerization and orchestration of e-commerce payment services using **Docker** and **Kubernetes**, deploying to a managed **EKS** cluster that handled **500k+** concurrent transactions during peak holiday shopping periods while maintaining strict PCI-DSS compliance requirements.
- Designed and deployed Infrastructure as Code using **Terraform** to manage networking, security groups, and database resources across multiple AWS accounts and regions, reducing infrastructure provisioning time from **3 weeks** to **2 days** and standardizing configuration across 40+ microservices.
- Built sophisticated CI/CD pipelines with **GitHub Actions** that executed automated security scans, performance tests, and blue-green deployments for the Walmart.com advertising platform, reducing time-to-production from **6 hours** to **15 minutes** and eliminating manual deployment errors.
- Implemented comprehensive monitoring and alerting using **CloudWatch** and **New Relic**, tracking latency, error rates, and resource utilization across distributed services that processed billions of daily retail transactions, which reduced mean time to resolution for production incidents by **50%**.

- Optimized **RDS** and **S3** usage patterns through data lifecycle policies and query optimization, reducing monthly AWS costs by **\$180k** while maintaining SLA compliance for the retail analytics platform serving 500+ internal dashboards.
- Deployed **API Gateway** configurations with caching, rate limiting, and request transformation for third-party partner integrations, enabling Walmart Connect advertising network to onboard 200+ new retailers without performance degradation.
- Collaborated with the financial services team to implement compliance automation for payment processing systems, integrating vulnerability scanning and audit logging into the deployment pipeline and achieving zero compliance violations across quarterly audits.
- Led troubleshooting of critical **Lambda** cold-start latency issues in the fulfillment service, implementing concurrent execution limits and provisioned concurrency strategies, reducing order processing latency by **28%** during peak demand windows.

E-POT

Jun 2018–July 2022

Full Stack Engineer

- Built and maintained containerized healthcare IT applications using **Docker** and **Kubernetes**, implementing rolling updates and health checks that improved deployment reliability for critical medical systems serving 50+ healthcare facilities without service interruption.
- Authored **Terraform** modules to provision cloud infrastructure for multiple client environments across AWS, standardizing deployments for banking and finance systems that processed millions of daily transactions while maintaining strict security and compliance requirements.
- Established CI/CD practices using **GitHub Actions**, automating test execution and artifact builds for medical record management systems, which reduced manual testing effort by **40%** and caught integration bugs before staging deployment.
- Implemented centralized logging and monitoring using **CloudWatch** for distributed banking systems, enabling rapid root cause analysis and reducing incident investigation time from **4 hours** to **30 minutes** for critical payment processing failures.
- Automated infrastructure provisioning for agricultural IoT systems using **Bash** and **Python** scripts, reducing manual setup time from **8 hours** to **15 minutes** and enabling rapid environment cloning for development and testing pipelines.
- Managed **RDS** databases supporting financial transaction processing, implementing automated backups, read replicas, and disaster recovery procedures that maintained RPO of **5 minutes** and RTO of **15 minutes** for production incidents.
- Developed deployment automation for multi-tier manufacturing IT systems, integrating version control, automated testing, and staged rollout strategies using shell scripting and **Git**, reducing deployment risk and enabling confident releases three times weekly.

EDUCATION

University of Tokyo

Apr 2014–Mar 2018

Bachelor of Science in Computer Science
