

Wellington Santos

Senior Software Engineer

santoss Wellington23@gmail.com · +55 19983546558 · Gonçalves Dias, Maranhão, Brazil · www.linkedin.com/in/welington-santos-53044a3b2/

PROFESSIONAL SUMMARY

Senior Software Engineer with **8+** years across e-commerce, sports commerce, and healthcare IT, building full-stack platforms with React and Java Spring Boot. Expert in design systems integration, API development, and booking/commerce workflows. Proven track record delivering search and checkout features on high-traffic platforms using Next.js, MongoDB, and AWS cloud services.

SKILLS

- Languages:** Java, JavaScript, TypeScript, Python, SQL, HTML, CSS
- Backend:** Spring Boot, Spring Framework, Spring MVC, Spring Data JPA, Express, Node.js, REST API
- Frontend:** React, Next.js, Redux, Context API, Tailwind CSS, Material-UI, Webpack, Vite
- Database:** MongoDB, PostgreSQL, MySQL, Redis, Elasticsearch
- Testing:** Jest, Pytest, JUnit, Mockito, React Testing Library, Cypress
- Cloud & DevOps:** AWS, Lambda, EC2, RDS, S3, CloudFront, Docker, Kubernetes, GitHub Actions, Jenkins, Terraform
- Others:** Swagger, GraphQL, RESTful API, Jira, Confluence, Git, GitHub, Agile, Scrum

EXPERIENCE

Fanatics

Senior Software Engineer

Oct 2023–Present

- Led the development of high-traffic commerce checkout flows using **React** and **Spring Boot**, integrating design system components and handling **80k+** daily purchase transactions across the sports merchandise ecosystem.
- Spearheaded API expansion initiatives with **Swagger** documentation standards, designing and implementing RESTful endpoints that powered search filtering and product aggregation for internal product and mobile teams.
- Delivered end-to-end cart management features with **React** state management and **Spring Data JPA** persistence, reducing checkout abandonment by **18%** and streamlining the customer purchasing experience.
- Collaborated with designers to implement a unified design system across checkout and product discovery surfaces, building reusable **React** components that enforced typography, spacing, and color standards from Figma designs.
- Optimized **MongoDB** queries for real-time inventory lookups during peak traffic periods, cutting database response times from **1.2 seconds** to **240ms** and eliminating timeout-related checkout failures.

- Implemented comprehensive logging and error tracking using **CloudWatch** and custom middleware, enabling rapid incident detection and reducing mean time to resolution by **35%**.
- Mentored two junior engineers on full-stack patterns, pair-programming on API contract design and **React** component testing with **Jest**, establishing team standards for error handling and data validation.
- Architected database schema changes to support new product attributes and variants, working with the product team to minimize migration risk while preserving historical data integrity in **MongoDB**.
- Participated in on-call rotation supporting production services, resolving urgent issues in **Spring Boot** microservices and **React** frontend deployments within **30 minutes** of escalation.
- Extended existing **AWS** Lambda functions to precompute search facets, reducing frontend query load and improving initial page render times by **22%** on search result pages.

Walmart

Sep 2022–Oct 2023

Senior Software Engineer

- Drove the evolution of the e-commerce search and filter system using **Next.js** and **Spring Boot**, implementing faceted search with **Elasticsearch** that powered millions of daily product searches across Walmart.com.
- Owned the redesign of checkout cart persistence logic, migrating from session-based storage to **MongoDB** document store, which eliminated cart loss during session timeouts and improved checkout completion by **12%**.
- Designed and documented **Swagger** API specifications for product and inventory services, establishing clear contracts between frontend and backend teams and reducing integration misalignments by **40%**.
- Built critical integrations with third-party payment providers and fulfillment systems, implementing robust retry logic and circuit breakers in **Spring Framework** to handle transient failures gracefully.
- Refactored the legacy checkout flow to use **React** hooks for state management, replacing class-based components and reducing bundle size by **16%** while improving developer velocity.
- Collaborated with data and analytics teams to track cart abandonment metrics and checkout funnel performance, instrumenting **React** components with event tracking that revealed a **\$2M** annual revenue opportunity.
- Maintained deployment pipelines using **GitHub Actions** and **Terraform**, enabling automated infrastructure provisioning and reducing deployment time from **45 minutes** to **12 minutes**.
- Supported accessibility compliance initiatives, auditing **React** components for WCAG 2.1 AA standards and implementing fixes for keyboard navigation and screen reader compatibility.
- Coordinated with product managers and designers to scope and estimate complex features, ensuring technical feasibility and meeting quarterly OKRs for the e-commerce platform.

E-POT

Jun 2018–July 2022

Full Stack Engineer

- Built end-to-end healthcare IT solutions on **Java** and **Spring Boot** backend with **React** frontend, serving medical practices with patient scheduling, billing, and clinical documentation features.
- Implemented search functionality for medical record systems using **Elasticsearch**, enabling physicians to retrieve patient histories and lab results in sub-second response times across datasets of **10M+** records.

- Developed booking flow components for appointment scheduling using **React** and **Redux**, integrating with **Spring Boot** APIs and reducing no-show rates by **8%** through improved appointment reminders.
- Migrated financial transaction processing from monolithic architecture to microservices using **Spring Framework**, each service owning a distinct domain (accounting, invoicing, reconciliation) and improving deployment frequency to **3x per week**.
- Designed and implemented **MongoDB** schema for patient consent and privacy preferences, enabling compliance with HIPAA audit trails and simplifying complex regulatory queries.
- Established automated testing standards using **Jest** for frontend unit tests and **JUnit** with **Mockito** for backend service tests, growing test coverage from **42%** to **78%** across the codebase.
- Deployed healthcare applications to **AWS** using **Docker** containers and **Kubernetes** orchestration, ensuring **99.8%** uptime during peak patient access hours.
- Documented REST APIs comprehensively with **Swagger**, making it easier for partner organizations to integrate scheduling and billing systems into their existing workflows.

EDUCATION

University of Tokyo

Bachelor of Science in Computer Science

Apr 2014–Mar 2018
