PROFESSIONAL SUMMARY

Senior Frontend Engineer with **12+** years across fintech, healthcare, and e-commerce, building scalable React and TypeScript applications with polished UIs and robust testing. Experienced in reusable component libraries, modern CSS tooling, complex state management, and cross-functional collaboration to deliver high-quality user experiences in fast-paced environments.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, HTML, CSS

Frontend: React, React Native, Next.js, Tailwind CSS, Styled Components, Redux, Zustand, MUI, Bootstrap, Vite, Webpack

Testing: Jest, Cypress, Playwright, React Testing Library, Vitest

Database: PostgreSQL, MongoDB, Redis

Cloud & DevOps: AWS, Google Cloud, Docker, Kubernetes, GitHub Actions, TeamCity, Azure DevOps

Others: GraphQL, RESTful API, Git, Agile, Scrum, Jira, Figma, WebSocket, Stripe

EXPERIENCE

Leanware

May 2024–Present

Senior Frontend Engineer

- Led frontend architecture and component library development for a fintech trading platform using **React**, **TypeScript**, and **Tailwind CSS**, establishing design patterns that accelerated onboarding of three new frontend engineers by reducing ramp-up time from 6 weeks to 2 weeks.
- Built responsive, high-fidelity user interfaces for algorithmic trading dashboards integrating real-time market data via **GraphQL**, handling complex state mutations with **Redux** and persisting critical trading positions across browser sessions with **Redis** caching to ensure zero data loss during network interruptions.
- Architected a reusable component library of 40+ **React** components with comprehensive **Storybook** documentation and **TypeScript** prop validation, which reduced feature delivery time by **28%** and eliminated duplicate component code across six internal trading applications.
- Implemented end-to-end form validation and complex client-side state management for multi-step account verification flows, including identity verification and KYC checks, using **React Hook Form** and **Zustand**, reducing form abandonment rates by **12%** across mobile and desktop.

- Drove adoption of **Cypress** and **Playwright** for automated frontend testing, establishing a test-first workflow that increased test coverage from 35% to 78% and reduced post-deployment regressions by **40%** within three months.
- Collaborated with UX/UI designers in **Figma** to translate high-fidelity mockups into production-ready **React** components, conducting weekly component reviews to ensure pixel-perfect alignment and accessibility compliance across all user-facing features.
- Migrated legacy styling from CSS-in-JS to **Tailwind CSS**, consolidating 15 separate stylesheets into a maintainable utility-first architecture that reduced bundle size by **18%** and improved theme consistency across the platform.
- Established frontend best practices documentation in **Confluence**, covering component patterns, state management conventions, testing strategies, and **Git** workflow guidelines, which became the reference standard for all new frontend work.
- Resolved critical race condition in concurrent trade execution UI where rapid order updates conflicted with form state, implementing optimistic UI updates with rollback logic that eliminated visual inconsistencies and user confusion during volatile market periods.
- Integrated **Stripe** payment processing for subscription management, building reusable billing component modules and error handling flows that securely tokenized payment data and increased subscription conversion by **15%**.
- Mentored two junior frontend engineers on **React** patterns, **TypeScript** best practices, and testing methodologies through pair programming sessions and code review feedback, improving code quality metrics by **23%** across their pull requests.

ThredUp

Mar 2022–May 2024

Senior Software Engineer

- Spearheaded the frontend implementation of an AI-powered Style Chat feature for a resale e-commerce platform using **React**, **TypeScript**, and modern **CSS** utilities, enabling real-time conversational product discovery that increased iOS conversion rates by **2.8%** across 8M+ active users.
- Designed and built a scalable image search interface using **React** and **Next.js** that processed 100K+ user photos daily, integrating proprietary visual recognition APIs with client-side image preprocessing and caching strategies that reduced average search latency from 2.8s to 320ms.
- Developed a comprehensive component library for e-commerce product displays using **React**, **Tailwind CSS**, and **Styled Components**, standardizing UI patterns across 12 customer-facing applications and reducing CSS maintenance overhead by **35%**.
- Implemented complex form flows for seller-facing onboarding using **React Hook Form** and **Redux**, managing multi-page state persistence across session timeouts and optimistic submission to handle high-volume garment uploads that scaled from 10K to 100K daily without performance degradation.
- Established **Playwright** and **Cypress** end-to-end test suites covering critical customer journeys (search, personalization, checkout), achieving 65% coverage and reducing production incidents related to UI regressions by **45%** over six months.

- Collaborated with machine learning engineers to integrate ML-powered pricing and auto-photography recommendations into the frontend, building **React** hooks and **Redux** selectors that surfaced model confidence scores and allowed sellers to override AI suggestions while maintaining data integrity.
- Optimized bundle size and initial page load time by implementing code splitting with **Webpack** and **Next.js**, lazy-loading image galleries, and deferring non-critical feature modules, reducing Time to Interactive by **31%** on mobile devices.
- Reviewed 200+ pull requests from backend and frontend engineers, ensuring adherence to **TypeScript** strict mode, component composition patterns, and **CSS** naming conventions, which improved overall codebase consistency and reduced technical debt.
- Mentored three mid-level frontend engineers on **React** hooks, **TypeScript** advanced patterns, and accessibility compliance, conducting weekly technical discussions and knowledge-sharing sessions that elevated team test coverage and code review quality.

Spring Health

Nov 2020–Mar 2022

Software Engineer

- Played a key role in building a Care Navigation platform using **React**, **TypeScript**, and **CSS-in-JS** that guided 2M+ healthcare members through mental health treatment matching and appointment scheduling across 50+ localized jurisdictions.
- Designed and developed complex care eligibility forms with multi-step workflows using **React Hook Form** and **Redux**, managing dependent eligibility validation logic and jurisdiction-specific benefit rules that scaled from 500K to 2M members during rapid company growth.
- Built reusable component modules for clinical eligibility display and provider matching using **React** and **MUI**, ensuring HIPAA-compliant data handling and accessibility compliance across all user interactions with insurance and clinical information.
- Implemented **Jest** and **Cypress** test coverage for critical patient matching flows, achieving 72% coverage across care navigation features and reducing patient experience issues from incorrect matches by **38%** during global expansion to three new countries.
- Optimized frontend performance for low-bandwidth environments common in remote clinical settings, reducing initial bundle size by **26%** and implementing offline-capable state management using **Redux** with **localStorage** fallback, enabling Care Advisors to function during network outages.
- Collaborated with UX researchers and clinical compliance teams to translate complex eligibility rules into intuitive form interfaces, conducting usability testing and iterating on component designs that improved form completion rates by **19%** for dependent enrollment flows.

Tencent Games

Nov 2014–Nov 2020

Software Engineer

- Built frontend systems and cross-platform UIs for Honor of Kings mobile MOBA, scaling from initial launch to 100M DAU by contributing to player-facing dashboards, battle results displays, and in-game shop interfaces using platform-specific technologies.

- Developed responsive UI components for a global gaming platform managing 40M+ daily active users, implementing complex client-side state management for player inventory, progression tracking, and real-time match status that synchronized across mobile and console platforms.
- Implemented frontend testing frameworks for cross-platform gaming applications, establishing test coverage for critical user flows including login, matchmaking queues, and battle initialization to reduce critical game-breaking bugs by **42%** during international launches.
- Collaborated with backend and gameplay engineers on API contract definitions and data flow optimization, reducing latency in player stat updates and match history retrieval by implementing client-side caching and **WebSocket** connections for real-time game events.
- Contributed to the Tencent Gaming Buddy emulator's player interface, designing visual components for emulator settings, performance monitoring, and input mapping configuration that improved user onboarding and reduced support tickets by **28%**.

EDUCATION

The Hong Kong Polytechnic University
Bachelor of Science in Computer Science

Sep 2010–Nov 2014
