PROFESSIONAL SUMMARY

Senior Software Engineer with **12+** years across fintech, healthcare, and e-commerce, building scalable React applications with TypeScript and REST API integration. Expert in enterprise component architecture, RBAC implementation, and responsive design. Proven track record delivering production-ready applications with strong focus on performance, maintainability, and cross-functional collaboration.

SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML, CSS

Frontend: React, Next.js, Redux, Material-UI, Tailwind CSS, Webpack, Vite, Responsive Web Design, Component Architecture

Backend: Node.js, Express, REST API, Authentication, Authorization

Database: PostgreSQL, MongoDB, Redis

Testing: Jest, Pytest, React Testing Library, Cypress, Playwright

Cloud & DevOps: AWS, Docker, Kubernetes, GitHub Actions, CI/CD, Google Cloud

Others: RESTful API, GraphQL, RBAC, Agile, Git, Jira, Analytics, Data Visualization

EXPERIENCE

Leanware

May 2024–Present

Senior Software Engineer

- Led development of analytics dashboard interface for a financial data platform, designing and implementing **React** components with **TypeScript** to display real-time market data and trading metrics, enabling **40+** concurrent users to monitor positions without performance degradation.
- Spearheaded the modernization of a legacy SaaS accounting application's frontend, building reusable UI component library in **React** and **Material-UI** that accelerated feature delivery by **35%** across multiple internal teams.
- Played a key role in architecting role-based access control for an enterprise fintech platform, implementing **RBAC** logic across the authentication layer and UI components using **React Context** and custom hooks to enforce user permissions across the application.
- Implemented responsive web design patterns across six SaaS products, ensuring mobile-first interfaces worked seamlessly on tablets and desktops while maintaining load times under **2.5 seconds** using **Webpack** optimization and code splitting.

- Integrated frontend applications with multiple **REST API** endpoints provided by backend teams, building custom hooks to manage API state with **Redux** and handling authentication token refresh cycles to support session persistence.
- Collaborated with UX designers to translate wireframes and business requirements into production-ready **React** components, iterating on user feedback and delivering pixel-perfect interfaces matching design specifications.
- Established frontend testing practices by implementing unit tests with **Jest** and integration tests with **React Testing Library**, increasing test coverage from **18%** to **72%** and reducing regression bugs in production.
- Optimized application performance by profiling bundle sizes, eliminating unused dependencies, and implementing lazy loading for critical routes, reducing initial page load time by **28%** on 4G networks.
- Mentored two junior engineers on modern **React** patterns, component composition, and debugging techniques, helping them ship their first features independently within **6 weeks**.
- Supported deployment activities by coordinating with DevOps on **GitHub Actions** workflow improvements and troubleshooting production issues, ensuring zero-downtime releases across multiple environments.
- Built secure authentication flow handling OAuth2 and session management, implementing secure token storage and automatic logout on inactivity to meet enterprise security compliance requirements.
- Delivered dashboard analytics module with real-time **data visualization** using **D3.js** and **Chart.js**, providing clients visibility into account activity and transaction trends with drill-down functionality.

ThredUp

Mar 2022–May 2024

Senior Software Engineer

- Drove the AI Shopping feature frontend architecture using **React** and **TypeScript**, building the image search and style chat interfaces that improved conversions by **2.8%** on iOS within the first quarter of launch.
- Owned the integration of Lily AI visual recognition API with the seller dashboard, designing **React** components that displayed tagged product images and auto-generated descriptions, increasing seller productivity and reducing processing time by **18%**.
- Developed enterprise reporting dashboard displaying garment-measurement model predictions and resale pricing recommendations, integrating **REST API** endpoints with **Redux** state management to handle real-time data for **172M+** inventory items.
- Built authentication and authorization system for seller portal using **React**, implementing **RBAC** to enforce role-based access controls across **55K+** brand accounts with fine-grained permission scoping.
- Architected reusable component library with **Material-UI** for the marketplace UI, establishing design system patterns and reducing style inconsistencies across applications by **60%** through centralized theming.
- Optimized mobile web performance for iOS and Android by implementing code splitting in **Webpack**, lazy-loading route components, and optimizing image delivery, achieving **3.2-second** load time on 4G.
- Integrated **GraphQL** queries for complex data fetching scenarios, replacing multiple **REST API** calls and reducing network overhead, improving performance of personalization ML feature by **22%**.

- Collaborated with backend engineers to align API contracts and data schemas, reducing integration bugs by establishing shared TypeScript interfaces and automating API validation in CI/CD pipelines.
- Implemented automated testing strategy using **Jest** and **Cypress** for critical user journeys, increasing regression test coverage to **68%** and catching **12+** production defects before release.
- Led performance profiling and remediation after a production incident where bundle size had grown to **4.2MB**, implementing aggressive code splitting and tree-shaking that reduced it to **1.8MB** and improved conversion metrics.

Spring Health

Nov 2020–Mar 2022

Software Engineer

- Contributed to Care Navigation platform frontend, building **React** components that matched **2M+** members to mental health providers based on clinical criteria while supporting **6x** platform growth and **125K+** concurrent users.
- Engineered global family member enrollment flow using **React** and **TypeScript**, implementing localization support for **12+** languages and jurisdiction-aware matching logic that enabled dependent eligibility across different healthcare systems.
- Built responsive authentication flow supporting multiple OAuth2 providers for enterprise client integration, implementing **RBAC** to enforce different user roles across employer, member, and provider interfaces.
- Designed and implemented **data visualization** dashboard component library for analytics team showing care navigation funnel metrics and member engagement trends, using **Chart.js** to help stakeholders understand platform performance across Fortune 500 clients.
- Integrated **REST API** endpoints from matching ML platform into Care Navigation UI, managing async data loading states and implementing caching with **Redis** to prevent redundant provider lookups during member matching.
- Collaborated with product and UX teams to translate complex clinical requirements into intuitive user interfaces, conducting user research sessions and implementing feedback that improved form completion rates by **12%**.
- Implemented enterprise security controls including encrypted token storage, secure API communication, and session management to meet **HIPAA** compliance requirements for **PepsiCo**, **Instacart**, and **Bain** onboarding.
- Mentored junior developers on component design patterns and **React** best practices, helping team establish consistent architecture that scaled from **3** to **8** frontend engineers during the **\$190M** Series C growth phase.

Tencent Games

Nov 2014–Nov 2020

Software Engineer

- Built web and mobile interfaces for Honor of Kings promotional website and player dashboard using **JavaScript** and **React**, supporting **100M+** daily active users with responsive design across Android and iOS platforms.

- Developed player analytics dashboard displaying match statistics, ranking progression, and engagement metrics using **D3.js** for **data visualization**, helping content teams understand user behavior and identify retention opportunities.
- Implemented anti-cheat reporting interface where players could submit violation reports and track resolution status, integrating with **ACE** kernel-level anti-cheat backend through **REST API** endpoints.
- Created responsive web portal for PUBG Mobile allowing players to manage loadouts and cosmetics, handling high-concurrency requests from **100K+** simultaneous players using **Node.js** backend with **Redis** caching.
- Engineered cross-platform UI component library supporting web, mobile, and console clients, establishing **React** patterns that reduced development time for new features by **25%** across multiple game titles.
- Built authentication system for game accounts supporting single sign-on across **40+** Tencent services, implementing secure token management and session handling for **TcaplusDB** integration.
- Optimized game website performance by implementing code splitting, image compression, and CDN delivery, reducing page load time from **6.2 seconds** to **2.8 seconds** for players in Southeast Asia.
- Collaborated with backend engineers to design and document **REST API** contracts for game services, establishing shared TypeScript types and implementing mock servers for frontend development parallelization.

EDUCATION

The Hong Kong Polytechnic University
Bachelor of Science in Computer Science

Sep 2010–Nov 2014
