

# Esteban Sitek

Senior QA Engineer | Tosca DI, SQL, ETL Testing, Data Warehouse

estebanbenjaminsitek74@gmail.com · +54 93885170292 · San Salvador de Jujuy, Jujuy, Argentina · [www.linkedin.com/in/esteban-benjamin-sitek-346771398/](https://www.linkedin.com/in/esteban-benjamin-sitek-346771398/)

## PROFESSIONAL SUMMARY

Senior QA Engineer with **12+** years across healthcare, e-commerce, and fintech, specializing in ETL testing, data integrity validation, and warehouse automation. Expert in **Tosca DI**, **SQL**, and **Data Warehouse** reconciliation across relational and cloud databases. Proven ability to design comprehensive test strategies, automate complex data validations, and deliver high-quality insights through structured defect analysis and root cause investigation.

## SKILLS

**Languages:** SQL, Python, JavaScript, TypeScript, HTML, CSS

**Testing & QA:** Tosca Data Integrity, Tricentis Tosca, Test Automation, Data Validation, ETL Testing, Data Warehouse Testing, Data Quality Testing, Source-to-Target Validation, Pytest, Selenium, Cypress

**Data & Database:** PostgreSQL, MySQL, Data Reconciliation, Metadata Testing, Aggregation Validation, Exception Analysis, MongoDB, Redis

**Backend:** Node.js, Express, FastAPI, Django, Spring Boot

**Frontend:** React, Next.js, Vue.js, Angular

**Database:** PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Snowflake, BigQuery

**Testing:** Pytest, Jest, Selenium, Cypress, Playwright, JMeter

**Cloud & DevOps:** AWS, Google Cloud Platform, Docker, Kubernetes, GitHub Actions, Jenkins, Terraform

**Others:** RESTful API, GraphQL, Git, GitHub, Jira, Confluence, Agile, Scrum, Apache Kafka

## EXPERIENCE

### Publicis Sapient

Jun 2024–Present

#### Senior Software Engineer

- Led the design and implementation of comprehensive data validation frameworks for enterprise data pipelines, integrating **Tosca DI** and **SQL** to automate source-to-target reconciliation across financial services and healthcare platforms, ensuring data accuracy and completeness for mission-critical systems.
- Spearheaded the development of reusable test automation assets using **Tosca Data Integrity**, creating metadata-based validation patterns that reduced manual testing effort by 45% and enabled the team to catch data anomalies before they reached production.
- Delivered end-to-end ETL validation strategies for three major data migration projects, conducting complex data quality testing with **PostgreSQL** and custom aggregation queries that identified and resolved discrepancies affecting reporting databases and data warehouses.
- Architected backend services using **Python** and **FastAPI** to expose data validation APIs that integrated with **Tosca DI** test cases, enabling non-technical stakeholders to run reconciliation reports without direct SQL

knowledge.

- Collaborated with business analysts and developers to establish data governance standards, designing test cases that validated business rules, transformation mappings, and exception handling across multiple source systems.
- Improved defect resolution time by 35% through detailed root cause analysis of data integrity issues, documenting patterns that helped prevent similar failures in production data warehouses.
- Mentored junior QA engineers on **ETL Testing** best practices and **Tosca** framework architecture, building a team capable of maintaining and extending automated validation assets across the data platform.
- Conducted metadata testing and validation of data loads into cloud-based data warehouses, verifying schema correctness and ensuring no data loss during transformation cycles.
- Automated exception handling workflows using **Python** scripts that captured data discrepancies in real time, reducing the investigation time for production incidents by 28%.
- Established continuous validation pipelines using **GitHub Actions** and **Docker**, deploying **Tosca DI** test suites to run after every ETL job completion, preventing degraded data quality from reaching downstream consumers.
- Performed advanced backend testing and aggregation validation across relational databases, identifying performance bottlenecks and recommending schema optimizations that improved query response time by 40%.
- Coordinated with cloud infrastructure teams to validate data loads in **AWS** environments, ensuring compliance with data warehouse best practices and security policies throughout the migration lifecycle.

## CareSimple

Oct 2022–May 2024

### Senior Full Stack Engineer

- Owned the quality assurance strategy for patient data pipelines in a healthcare virtual care platform, designing and executing rigorous test cases for **ETL** processes that validated data integrity across remote monitoring systems and population health databases.
- Implemented **Tosca Data Integrity** automation to reconcile patient records between source systems and data warehouses, catching duplicate entries and missing data anomalies that would have affected clinical reporting.
- Built comprehensive **SQL**-based validation queries to verify data transformations in the chronic care management module, testing aggregation logic across patient cohorts and ensuring business rule compliance for healthcare regulatory requirements.
- Developed backend services in **Node.js** and **Express** that exposed data quality metrics to clinical and operations teams, allowing real-time monitoring of patient record completeness and accuracy across the platform.
- Reduced data validation cycle time from 4 hours to 40 minutes by automating repetitive checks with **Tosca DI** and custom **Python** scripts, enabling faster feedback loops for ETL engineers.
- Conducted source-to-target validation testing for integrations with external health systems, verifying patient demographic data, vital signs, and lab results matched expectations across multiple FHIR-compliant endpoints.

- Identified and documented 87 data quality defects during a major data warehouse migration project, working closely with the data engineering team to resolve root causes and prevent recurrence in production.
- Created reusable **Tosca DI** test assets and metadata mappings for common healthcare data elements, establishing a library that accelerated test automation across new data integration projects by 50%.
- Performed database testing on **PostgreSQL** backends supporting the platform, validating referential integrity, constraint enforcement, and data consistency across patient records and clinical workflows.
- Collaborated with product managers and clinical stakeholders to define data quality acceptance criteria, translating requirements into automated test cases that ensured accuracy and trust in reporting data used for clinical decisions.

## Shopee

### Full Stack Engineer

Jul 2018–Sep 2022

- Played a key role in building data pipelines for the e-commerce platform, designing test frameworks that validated complex transformations across seller transactions, inventory updates, and financial records using **SQL** and custom validation scripts.
- Implemented automated data quality checks using **Python** and **PostgreSQL** to monitor data consistency across multiple regional data warehouses, detecting anomalies that could affect marketplace analytics and seller reporting.
- Constructed comprehensive test cases for ETL processes handling daily transaction reconciliation across payment systems and order databases, ensuring accuracy of financial data feeding into revenue reporting systems.
- Developed **React** frontends for internal data quality dashboards that displayed validation results and exception metrics, giving operations teams visibility into pipeline health and data integrity issues.
- Automated source-to-target reconciliation testing between production databases and analytical data warehouses using custom **Python** scripts, catching 23 data discrepancies before they reached the BI platform.
- Built backend APIs in **Node.js** and **Express** to support integration testing workflows, enabling QA teams to trigger data validation jobs and retrieve reconciliation reports on demand.
- Collaborated with data engineers to validate schema changes during quarterly data warehouse restructuring projects, ensuring backward compatibility and no loss of historical transaction data across seller accounts.
- Performed exception analysis on failed ETL jobs, documenting root causes and working with the team to implement preventive measures that reduced pipeline failures by 31% over 18 months.

## Altitude Games

### Full Stack Engineer

Nov 2014–Jul 2018

- Built the foundation for game analytics and data pipelines, developing test frameworks that validated player event data flowing from mobile clients into backend databases using **SQL** and custom validation logic.
- Designed and executed test cases for ETL processes that aggregated player behavioral data, verifying that game metrics (playtime, engagement, revenue) matched business logic expectations across multiple game titles.
- Implemented data validation scripts in **Python** to identify and report data quality issues in player transaction records and in-game purchase history, supporting financial reconciliation for the monetization team.

- Contributed to backend services in **Node.js** that ingested player events, working with QA workflows that tested data completeness and accuracy throughout the analytics pipeline.
- Automated testing of database migrations using **PostgreSQL**, ensuring game progression data and player account information remained intact during backend refactoring cycles.
- Collaborated with the data team to troubleshoot and resolve data inconsistencies affecting game analytics dashboards, reducing reporting errors by 19% through improved data validation practices.

## EDUCATION

---

**Ateneo de Manila University**  
Bachelor of Science in Computer Science

Aug 2010–Jul 2014
